 Precup,Raul-Cristian Roman,Elena-Lorena Hedrea,Alexandra-Iulia Szedlak-Stinean,Iuliu Alexandru Zamfirache,2025-03-25
 The book presents a detailed and unified treatment of the theory and applications of optimization applied to control and
 modeling focusing on nature inspired optimization algorithms to optimally tune the parameters of linear and nonlinear
 controllers and models with emphasis on tower crane systems and other representative applications Classical and Modern
 Optimization Techniques Applied to Control and Modeling combines classical and modern approaches to optimization based
 on the authors experience in the field and presents in a unified structure the essential aspects of optimization in control and
 modeling from a control engineer s point of view It covers linear and nonlinear controllers and neural networks based on
 reinforcement learning are considered and analyzed because of the need to reduce the complexity of the controllers and their
 design so that they can be practical to implement as low cost automation solutions The chapters are designed to quickly
 make the concepts of optimization control reinforcement learning and neural networks understandable to readers with
 limited experience This book is intended for a broad audience including undergraduate and graduate students engineers
 designers practitioners and researchers and anyone facing challenging control problems **Data-Driven Model-Free
 Controllers** Radu-Emil Precup,Raul-Cristian Roman,Ali Safaei,2021-12-26 This book categorizes the wide area of data driven
 model free controllers reveals the exact benefits of such controllers gives the in depth theory and mathematical proofs
 behind them and finally discusses their applications Each chapter includes a section for presenting the theory and
 mathematical definitions of one of the above mentioned algorithms The second section of each chapter is dedicated to the
 examples and applications of the corresponding control algorithms in practical engineering problems This book proposes to
 avoid complex mathematical equations being generic as it includes several types of data driven model free controllers such
 as Iterative Feedback Tuning controllers Model Free Controllers intelligent PID controllers Model Free Adaptive Controllers
 model free sliding mode controllers hybrid model free and model free adaptive Virtual Reference Feedback Tuning
 controllers hybrid model free and model free adaptive fuzzy controllers and cooperative model free controllers The book
 includes the topic of optimal model free controllers as well The optimal tuning of model free controllers is treated in the

chapters that deal with Iterative Feedback Tuning and Virtual Reference Feedback Tuning Moreover the extension of some model free control algorithms to the consensus and formation tracking problem of multi agent dynamic systems is provided This book can be considered as a textbook for undergraduate and postgraduate students as well as a professional reference for industrial and academic researchers attracting the readers from both industry and academia **Training and**
