

Instructions

Write a public static method named `insert`. The `insert` method should have the signature `insert(String[] words, String newWord, int place)`, should return a `String`, and should function as described below.

When called, if `place` does not represent a valid index for `words`, then the method will return a `String` that says "you need a valid number" to indicate the insertion could not be performed and so nothing else. Otherwise the method will insert the `String` `newWord` into the array `words` at the index `place`, moving each subsequent entry one place further and losing the final `String` in the array. The method will then return a concatenated string of all the words in the `words` array to indicate the insertion has taken place.

Use the runner class to test this method; do not add a main method to your code in the `U6_L4_Activity_One.java` file or it will not be scored correctly.

Sample runs (runner class):

```
Enter array length:
3
Enter values:
one
two
three
Enter new string:
four
Enter place:
1
Method returns: onefourtwo
Array contents: [one, four, two]
```

```
Enter array length:
2
Enter values:
that
this
Enter new string:
there
Enter place:
1
Method returns: you need a valid number
Array contents: [that, that]
