Designing Information Spaces: The Social Navigation Approach Kristina Höök,David Benyon,Alan J. Munro,2012-12-06

That s a look at an array of social proxies The purpose was to make it clear that the concept of social proxy is quite general Social proxies can be designed to support a wide range of on line interactions whether they involve conversation or not They may be synchronous or asynchronous and they may be associated with activities which are an end in them selves e g auctions or activities which are simply a means to an end e g waiting in queues We believe that by providing a shared represen tation of the activity in which participants are involved social proxies can help create shared expectations shared experiences and can serve as a resource which participants can use to structure their individual and collective interactions That is at least our claim However it is important to note that except for the first the proxies described so far are concept pieces meaning that

they haven't been implemented and deployed to real situations. Now however we will turn to an implemented system and look at a real example.

#### 1.4 Experience The Babble System

In the previous section we introduced the concept of social proxies and discussed examples illustrating the wide range of situations to which social proxies can be applied. In this section we focus on our experience in designing, implementing and studying a social proxy in the context of an on-line system called Babble.

*Event Data Recorder (EDR) Interpretation* Christopher D Armstrong, 2018-11-02 Collision Reconstruction Methodologies Volume 7A The last ten years have seen explosive growth in the technology available to the collision analyst changing the way reconstruction is practiced in fundamental ways. The greatest technological advances for the crash reconstruction community have come in the realms of photogrammetry and digital media analysis. The widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data, create 3D models and visualize and analyze crash vehicles and environments. The introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of a crash reconstruction. Because of the technological changes occurring in the industry many SAE papers have been written to address the validation and use of new tools for collision reconstruction.

Collision Reconstruction Methodologies Volumes 1-12 bring together seminal SAE technical papers surrounding advancements in the crash reconstruction field. Topics featured in the series include Night Vision Study and Photogrammetry, Vehicle Event Data Recorders, Motorcycle, Heavy Vehicle, Bicycle and Pedestrian Accident Reconstruction. The goal is to provide the latest technologies and methodologies being introduced into collision reconstruction appealing to crash analysts, consultants and safety engineers alike.
