Benth, Jurate Saltyte Benth, Steen Koekebakker, 2008 The markets for electricity gas and temperature have distinctive features which provide the focus for countless studies For instance electricity and gas prices may soar several magnitudes above their normal levels within a short time due to imbalances in supply and demand yielding what is known as spikes in the spot prices The markets are also largely influenced by seasons since power demand for heating and cooling varies over the year The incompleteness of the markets due to nonstorability of electricity and temperature as well as limited storage capacity of gas makes spot forward hedging impossible Moreover futures contracts are typically settled over a time period rather than at a fixed date All these aspects of the markets create new challenges when analyzing price dynamics of spot futures and other derivatives This book provides a concise and rigorous treatment on the stochastic modeling of energy markets Ornstein Uhlenbeck processes are described as the basic modeling tool for spot price dynamics where innovations are driven by time inhomogeneous jump processes Temperature futures are studied based on a continuous higher order autoregressive model for the temperature dynamics The theory presented here pays special attention to the seasonality of volatility and the Samuelson effect Empirical studies using data from electricity temperature and gas markets are given to link theory to practice *Risk Management and Simulation* Aparna Gupta, 2016-04-19 The challenges of the current financial environment have revealed the need for a new generation of professionals who combine training in traditional finance disciplines with an understanding of sophisticated quantitative and analytical tools Risk Management and Simulation shows how simulation modeling and analysis can help you solve risk management *Economic and Environmental Sustainability of the Asian Region* Sucha Singh Gill, Lakhwinder Singh, Reena Marwah, 2012-12-06 Asian economic development and environmental consequences are not only crucial for the wellbeing of the people but are of great relevance for the global economy The ongoing intense debate on carbon emission mitigating strategies for reducing the impact of environmental consequences has undermined the principle of equity and put a question mark on the sustainability of the development process of the most dynamic Asian economies This volume explores fresh perspectives on the issues of wellbeing Asian economic development and environmental concerns The book is organised along six themes issues in sustainability of Asian agriculture ecological concerns in theory and practice core themes in economic development resource management and policy alternatives discrimination and socio economic equity in development and peasant distress and sustainability of cotton economy The articles are based on unique quantitative data and a rigorous analytical framework for examining policies for an equitable economic and environmental international regime
