Natural Disaster Reduction Jochen Zschau, Andreas N. Küppers, 2013-11-11 This volume is the result of the International IDNDR Conference on Early Warning Systems for the Reduction of Natural Disasters held at the Geo Forschungszentrum in Potsdam Germany from 7-11 September 1998. Endorsed by the United Nations International Decade for Natural Disasters Reduction which had been established by the United Nations General Assembly in December 1989, it was jointly organised by the GeoForschungszentrum Potsdam and the German IDNDR Committee. The event brought together 370 scientists, public officials and representatives of the United Nations system, non-governmental and international organisations and diverse professional, commercial and civic individuals from 86 countries. Together they comprised a wide and multidisciplinary range of experience as both providers and users of early warning and preparedness information related to natural disasters. The Potsdam Early Warning Conference represented the first major thematic component of IDNDR's concluding evaluation. It provides recommendations to ensure disaster reduction into the 21st Century. The conference dealt with an essential goal of the decade expressed as a major priority of the Decade's Scientific and Technical Committee. It was included in the Plan of Action adopted at the 1994 World Conference on Natural Disaster Reduction in Yokohama, Japan, and was the subject of three subsequent UN General Assembly resolutions on the improved effectiveness of early warning between 1994 and 1997. The German Minister for Foreign Affairs, Mr. Cloud Warriors Thomas E. Weber, 2025-06-03. The unprecedented inside story of the people pushing boundaries of science and technology to build better weather forecasts, providing life-saving warnings and crucial intelligence about nature's deadliest threats: Killer tornadoes, Catastrophic hurricanes, Lethal heat waves. Across the United States and around the world, extreme weather events bring an unending torrent of death and destruction. One indispensable tool consistently offers the ability to help reduce the impact of these calamities: the weather forecast. For centuries, humans have sought to foretell nature's next moves, from ancient farmers to trailblazers of the Space Age who brought computers and satellites to bear on the problem. Now, a new wave of advances, including artificial intelligence and data-gathering drones, makes it possible to accurately detect these fearsome events further in advance. They provide critical time to prepare and get people out of harm's way, an undertaking made ever more urgent by the effects of climate change. In a remarkable tale of innovation and perseverance, veteran journalist Thomas E. Weber takes readers into the world of the pioneers creating these game-changing forecasts. From storm chasers racing to hunt twisters and physicists unraveling the secrets of the atmosphere to scientists studying how people react to warnings to humanitarian groups rushing to avert famines, Weber goes behind the scenes to show how predictions keep getting better. He explains what's needed to turn these forecasts into actions that prevent tragedies and how anyone can become more weather-literate to protect themselves in emergencies. *Cloud Warriors* will change the way you think about treacherous weather and the power of being able to see it coming. **Scientific American**, 1929.
