IBM i Program Conversion: Getting Ready for 6.1 and Beyond Deb Landon,Mike Charlton,Theresa Gardiner,Paul Godtland,Mayumi Matsukawa,Ian J. Mills,Roger Southwick,IBM Redbooks,2010-03-17 IBM delivered IBM i 6 1 in March 2008 With 6 1 IBM exploits the capabilities of the Machine Interface MI architecture to significantly improve programs Programs can benefit from better performance a range of new operating system and processor capabilities and even stronger system integrity To enable these improvements all MI programs created for previous releases must be converted to run on 6 1 or a later release MI programs include integrated language environment ILE and original program model OPM programs To convert a program its creation data which is a subset of observability must be available MI programs retain creation data by default so that most programs can be converted going all the way back to programs that were originally created for System 38 Even if an option was chosen to remove creation data from external access Licensed Internal Code LIC can still access the creation data if the target releases of the program and its constituent modules are V5R1 or later Thus a program lacks sufficient creation data for conversion

only if the program or at least one of its modules was created for IBM OS 400 V4R5 or an earlier release and creation data was explicitly removed You can run the Analyze Object Conversion ANZOBJCVN command on V5R4 or V5R3 to help plan for your upgrade The ANZOBJCVN command identifies programs that will not convert to run on 6.1 or later releases if any and estimates the times that are required for the program conversions It also provides information about two other types of conversions integrated file system names and spooled files You can access the ANZOBJCVN command by loading and applying the appropriate PTFs that are listed in this paper This IBM Redpaper™ publication is intended for system administrators and field technicians to help them understand and prepare for upgrading or migrating to 6.1 or a later release It explains what the program conversion is and why programs are being created or recreated on 6.1 or a later release It then provides detailed steps for using the ANZOBJCVN tool on V5R3 or V5R4 to prepare for object conversions Finally it discusses the program conversion methods for converting programs to run on 6.1 or a later release Note The first edition of this paper was entitled IBM i5 OS Program Conversion Getting Ready for i5 OS V6R1 REDP 4293 00 The title of this second edition has been slightly modified to IBM i Program Conversion Getting Ready for 6.1 and Beyond REDP 4293 01 to reflect the new naming conventions for IBM i
