Weather Studies, 2007 *An Overview of the National Oceanic and Atmospheric Administration Budget Request for Fiscal Year 2015* United States. Congress. House. Committee on Science, Space, and Technology (2011). Subcommittee on Environment, 2014 *Integrating Social and Behavioral Sciences Within the Weather Enterprise* National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Division on Earth and Life Studies, Board on Human-Systems Integration, Board on Environmental Change and Society, Board on Atmospheric Sciences and Climate, Committee on Advancing Social and Behavioral Science Research and Application Within the Weather Enterprise, 2018-02-05 Our ability to observe and forecast severe weather events has improved markedly over the past few decades Forecasts of snow and ice storms hurricanes and storm surge extreme heat and other severe weather events are made with greater accuracy geographic specificity and lead time to allow people and communities to take appropriate protective measures Yet hazardous weather continues to cause loss of life and result in other preventable social costs There is growing recognition that a host of social and behavioral factors affect how we prepare for observe predict respond to and are impacted by weather hazards For example an individual s response to a severe weather event may depend on their understanding of the forecast prior experience with severe weather concerns about their other family members or property their capacity to take the recommended protective actions and numerous other factors Indeed it is these factors that can determine whether or not a potential hazard becomes an actual disaster Thus it is essential to bring to bear expertise in the social and behavioral sciences SBS including disciplines such as anthropology communication demography economics geography political science psychology and sociology to understand how people s knowledge experiences perceptions and attitudes shape their responses to weather risks and to understand how human cognitive and social dynamics affect the forecast process itself *Integrating Social and Behavioral Sciences Within the Weather Enterprise* explores and provides guidance on the challenges of integrating social and behavioral sciences within the weather enterprise It assesses current SBS activities describes the potential value of improved integration of SBS and barriers that impede this integration develops a research agenda and identifies infrastructural and institutional arrangements for successfully pursuing SBS weather research and the transfer of relevant findings to operational settings **Methanol: Hearings Before the Subcommittee on Energy Research, Development and Demonstration of the Committee on Science and Technology, U. Subcommittee on Energy Research, Development, and Demonstration (Fossil Fuels), 1976 **Geoinformatics and Atmospheric Science** Tomasz Niedzielski, Krzysztof Migala, 2017-09-09 This volume presents recent developments in atmospheric sciences driven by numerical modeling which makes use of geospatial

technologies and increasing computational power. It gathers examples of how geoinformatics supports meteorological, climatological, and water-related studies. One of the most important features of geospatial technologies is that they provide methods and tools which may be utilized in real time or near real time in order to monitor and predict atmospheric processes. This is particularly crucial in areas where dynamics of atmospheric phenomena is considerable and causes difficulties in accurate forecasting. One of such areas is the transitional zone between oceanic and continental features of the mid-latitude climate. Good examples of investigations into the transitional zone come from Poland and its neighboring countries. The topical volume provides the reader with a selection of papers on physically based and data-based modelling of weather-related phenomena over Poland. This main theme of the topical volume is extended to cover case studies on the use of geoinformatics in atmospheric studies in other regions at a range of spatial scales. National Weather Service Staff Reductions Proposed for Fiscal Year 1997 and Projected for Fiscal Year 1998 United States. Congress. Senate. Committee on Commerce, Science, and Transportation. Subcommittee on Science, Technology, and Space, 1998. *Marine Navigation and Safety of Sea Transportation* Adam Weintrit, 2013-06-05. The TransNav 2013 Symposium held at the Gdynia Maritime University, Poland, in June 2013 has brought together a wide range of participants from all over the world. The program has offered a variety of contributions allowing to look at many aspects of the navigational safety from various different points of view. Topics presented and discussed at the *Scientific and Technical Aerospace Reports*, 1994. Fast Processes in Large-Scale Atmospheric Models Yangang Liu, Pavlos Kollias, 2023-12-19. Improving weather and climate prediction with better representation of fast processes in atmospheric models. Many atmospheric processes that influence Earth's weather and climate occur at spatiotemporal scales that are too small to be resolved in large-scale models. They must be parameterized, which means approximately representing them by variables that can be resolved by model grids. *Fast Processes in Large Scale Atmospheric Models: Progress, Challenges, and Opportunities* explores ways to better investigate and represent multiple parameterized processes in models and thus improve their ability to make accurate climate and weather predictions. Volume highlights include: Historical development of the parameterization of fast processes in numerical models; Different types of major sub-grid processes and their parameterizations; Efforts to unify the treatment of individual processes and their interactions; Top-down versus bottom-up approaches across multiple scales; Measurement techniques, observational studies, and frameworks for model evaluation; Emerging challenges, new opportunities, and future research directions. The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity. Its publications disseminate scientific knowledge and provide resources for researchers, students, and professionals. *Inventing Atmospheric Science* James Rodger Fleming, 2016-02-05. This big picture history of atmospheric research examines the first six decades of the twentieth century from the dawn of applied fluid dynamics to the emergence by 1960 of the interdisciplinary atmospheric sciences. Using newly available archival sources, it documents the work of three interconnected

generations of scientists Vilhelm Bjerknes Carl Gustaf Rossby and Harry Wexler whose aspirations were fueled by new theoretical insights pressing societal needs and expanded technological capabilities Radio radar aviation nuclear tracers digital computing sounding rockets and satellites provided new ways to measure and study the global atmosphere a huge and dauntingly complex system Bjerknes brought us a fundamental circulation theorem and founded the Bergen school of weather forecasting Rossby established the graduate schools of meteorology at M I T Chicago and Stockholm which focused on upper air dynamics and after 1947 on atmospheric environmental issues and Wexler brought all the new technologies into the U S Weather Bureau and with his colleague Jule Charney prepared the foundations for the emergence of the interdisciplinary atmospheric sciences This history weaves together cold war studies military history the rise of government research and development and aviation and aeronautics with a nascent global awareness It is a fascinating history of something we all experience the weather told through compelling historical characters Provided by publisher **The National Climate Program Act** United States.
