

WEATHER AND CLIMATE

Key Concept

Precipitation data for one month can be described as the total precipitation over the whole month.

Precipitation data for a month shows how much rain, snow, or other types of water fall from the sky during that time. To describe the precipitation for the whole month, we look at the total amount of precipitation. This means adding up all the rain or snow that fell on each day of the month. For example, if it rained 2 inches on one day and 3 inches on another day, the total precipitation for those two days would be 5 inches. This helps us understand how wet or dry a month was, which can tell us about the weather patterns for that time of

Key Concept

Scientists analyze evidence to find the strongest evidence. Stronger evidence makes an argument more convincing.

Scientists study evidence about weather to understand how it works and to predict future conditions. They collect data from things like temperature, precipitation, and wind and air pressure. By using this data, they can make predictions about the weather.

For the most confident predictions for weather, scientists report the same weather for more than one day. This helps them make better decisions about the weather and it also helps them make better decisions about the weather.
