Bendsoe, 2013-03-14 In the past the possibilities of structural optimization were restricted to an optimal choice of profiles and shape Further improvement can be obtained by selecting appropriate advanced materials and by optimizing the topology i e finding the best position and arrangement of structural elements within a construction The optimization of structural

topology permits the use of optimization algorithms at a very early stage of the design process The method presented in this book has been developed by Martin Bendsoe in cooperation with other researchers and can be considered as one of the most effective approaches to the optimization of layout and material design
