Functional Imaging and Modeling of the Heart Hans van Assen,Peter Bovendeerd,Tammo Delhaas,2015-06-20 This book constitutes the refereed proceedings of the 8th International Conference on Functional Imaging and Modeling of the Heart held in Maastricht The Netherlands in June 2015 The 54 revised full papers were carefully reviewed and selected from 72 submissions The focus of the papers is on following topics function imaging models of mechanics and models of electrophysiology Developments in Cardiac Implantable Electronic Device Therapy: How can we improve clinical implementation? Mate Vamos,Alexander Benz,Gabor Duray,Julia W. Erath,2023-06-27 The use of cardiac implantable electronic devices CIEDs has substantially increased in the last decades They have a significant impact on reducing morbidity and mortality of patients suffering from cardiac arrhythmias and heart failure Several developments of technical issues have appeared over recent years to improve safety and efficacy However their role in daily clinical practice is still unclear For instance different leadless technologies such as leadless pacemakers subcutaneous defibrillators or wearables are only partly or not included in the current guideline recommendations There are also several attempts to improve clinical response to cardiac resynchronization therapy with multipoint or fusion optimized technologies it is however not clear which patients really benefit from these The same is true for novel conduction system pacing modalities His bundle pacing seems to be the most physiologic activation of the left ventricle but may be easier to perform The classical indications for primary prophylactic ICD are also questioned based on some new study results highlighting the need for an improved more detailed and individual risk stratification for better patient selection We have important but somehow controversial study results regarding preventive antibiotic therapy incremental perioperative antibiotics vs antibiotic eluting envelope during CIED implantation Lead extraction tools are also expanding but randomized controlled trials regarding the best approach are completely missing in this field The importance of remote monitoring is also constantly growing especially in the current pandemic times the best way of patient selection needs however more research **Contrast Echocardiography** Harald Becher,Andreas Helfen,2019-07-03 This book provides a comprehensive overview of the practical aspects of contrast echocardiography It also covers all the material in the guidelines published by the American Society of Echocardiography ASE in 2018 and the recommendations set out by the European Association of Cardiovascular Imaging EACVI in 2017 Contrast echocardiography

at present is only used in 5-10% of cases but this is expected to grow rapidly following the recommendations of the ASE and EACVI. The chapters cover the approved indications and provide practical advice on how to administer the contrast agents and how to optimize the recordings as well as how to deal with the pitfalls. The reader will find all the information on how to use contrast agents for assessment of shunts, LV volumes and function as well as myocardial diseases and masses. Detailed protocols are included for stress echocardiography and myocardial perfusion imaging. Other topics covered include the use of contrast agents for coronary sonography and transesophageal echocardiography. **Contrast Echocardiography Compendium for Clinical Practice** comprehensively covers all aspects of the clinical use of contrast echocardiography and has been written by two cardiologists who share their experience from their high volume echo laboratories. One of the authors has been a member of both the ASE guidelines and EACVI recommendation writing groups. It is therefore a critical text for echocardiographers and sonographers who perform echocardiography.
