Young Adult Drinking Styles

Dominic Conroy, Fiona Measham, 2019-11-30 This book brings together cutting edge contemporary research and discussion concerning drinking practices among young adults individuals aged approximately 18-30 years old. Its chapters showcase an interdisciplinary range of perspectives from psychology, sociology, criminology, geography, public health and social policy. The contributors address themes including how identity becomes involved in young adult drinking practices, issues relating to the non-consumption of alcohol within friendship groups and the role of social context, religious and ethnic orientation, gender identity and social media use. In doing so they highlight changing trends in alcohol consumption among young people which have seen notably fewer young adults consuming alcohol over the last two decades. In acknowledging the complex nature of drinking styles among young adults, the contributors to this collection eschew traditional understandings of young adult drinking which can pathologise and generalise. They advocate instead for an inclusive approach as demonstrated in the wide range of disciplinary backgrounds, cultural perspectives, methods and international settings represented in this book in order to better understand the economic, socio-cultural and pharmacological crossroads at which we now stand. This book will appeal in particular to researchers, theorists, practitioners and policy makers working in the alcohol and drugs field, public health and health psychology, in addition to students and researchers from across the social sciences. **OECD Health**

Young Adulthood Andy Furlong, 2009-06-02 The parameters within which young people live their lives have changed radically. Changes in education and the labour market have led to an increased complexity of the youth phase and to an overall protraction in dependency and transitions. Written by leading academics from several countries, this Handbook introduces up-to-date perspectives on a wide range of issues that affect and shape youth and young adulthood. It provides an authoritative and multi-disciplinary overview of a field of study that offers unique insight on social change in advanced societies and is aimed at academics, students, researchers and policy makers. The Handbook introduces some of the key theoretical perspectives used within youth studies and sets out future research agendas. Each of the ten sections covers an important area of research from education and the labour market to youth cultures, health and crime, whilst discussing change and continuity in the lives of young people. This work introduces readers to some of the most important work in the field while highlighting the underlying perspectives that have been used to understand the complexity of modern youth and young adulthood. *Alcohol Advertising and Young People's Drinking* B. Gunter, A. Hansen, M. Touri, 2010-10-13 There is

widespread and growing concern about the use of alcohol in society, especially by young people. Although overall volumes of alcohol consumption may be levelling off, the occurrences of excessive or binge drinking, especially among teenagers and young adults, are increasingly commonplace. Tackling irresponsible drinking, which is linked to other antisocial behaviour and

health problems has focused attention on the promotion of alcohol by its producers as an important causal factor This has led to calls for tougher regulation of alcohol marketing including restrictions on where it can occur and the form it is allowed to take Empirical research evidence often emanating from government funded enquiries and endorsed by health lobbies has been cited in support of an allegedly primary role played by advertising in triggering interest in and the onset of alcohol consumption among young people and in encouraging regular and heavy drinking Close examination of this evidence however reveals that the research is not always as cut and dried as it may first appear Methodological weaknesses abound in studies of the purported effects of alcohol advertising and other forms of marketing and the significance specifically of advertising as an agent that shapes young people s alcohol consumption could be weaker than often thought This book sets out a review and critique of the evidence on alcohol advertising and marketing effects on young people and considers this evidence in relation to codes of advertising and marketing practice

Binge Drinking in the Adolescent and Young Brain Eduardo López-Caneda, Fernando Cadaveira, Salvatore Campanella, 2019-03-20 Binge drinking BD is a highly prevalent pattern in most Western countries characterized by the intake of large amounts of alcohol in a short time followed by periods of abstinence This abusive form of alcohol consumption is a regular practice in around a third of European and American youths The high prevalence of BD at this age is of particular concern since adolescence and youth are in a period of special vulnerability to neurotoxic effects of alcohol mainly due to the structural and functional changes going on in the brain throughout this key developmental stage Evidence gathered during the last decade from animal and human studies seems to point to multiple brain anomalies associated with BD In this Research Topic we have collated a compendium of articles that address multiple aspects of BD during adolescence and young adulthood such as identification prevalence gender differences and neurocognitive anomalies associated with this excessive alcohol consumption pattern These articles collectively highlight the breadth of current research conducted in this field but also the need to join efforts to improve the screening of the BD pattern the characterization of its consequences as well as the translation of knowledge acquired in the laboratory into clinical practice We remain confident that this Research Topic will contribute significantly to the understanding of BD and its consequences and will further stimulate high quality investigation in this relatively new research field
