Environmental and Low Temperature Geochemistry presents conceptual and quantitative principles of geochemistry in order
to foster understanding of natural processes at and near the earth s surface as well as anthropogenic impacts and
remediation strategies It provides the reader with principles that allow prediction of concentration speciation mobility and
reactivity of elements and compounds in soils waters sediments and air drawing attention to both thermodynamic and kinetic
controls The scope includes atmosphere terrestrial waters marine waters soils sediments and rocks in the shallow crust the
temporal scale is present to Precambrian and the spatial scale is nanometers to local regional and global This second edition
of Environmental and Low Temperature Geochemistry provides the most up to date status of the carbon cycle and global

warming including carbon sources sinks fluxes and consequences as well as emerging evidence for and effects of ocean acidification Understanding environmental problems like this requires knowledge based in fundamental principles of equilibrium kinetics basic laws of chemistry and physics empirical evidence examples from the geological record and identification of system fluxes and reservoirs that allow us to conceptualize and understand This edition aims to do that with clear explanations of fundamental principles of geochemistry as well as information and approaches that provide the student or researcher with knowledge to address pressing questions in environmental and geological sciences New content in this edition includes Focus Boxes one every two or three pages providing case study examples e g methyl isocyanate in Bhopal origins and health effects of asbestiform minerals concise explanations of fundamental concepts e g balancing chemical equations isotopic fractionation using the K_{eq} to predict reactivity and useful information e g units of concentration titrating to determine alkalinity measuring redox potential of natural waters Sections on emerging contaminants for which knowledge is rapidly increasing e g perfluorinated compounds pharmaceuticals and other domestic and industrial chemicals Greater attention to interrelationships of inorganic organic and biotic phases and processes Descriptions theoretical frameworks and examples of emerging methodologies in geochemistry research e g clumped C O isotopes to assess seawater temperature over geological time metal stable isotopes to assess source and transport processes X ray absorption spectroscopy to study oxidation state and valence configuration of atoms and molecules Additional end of chapter problems including more quantitatively based questions Two detailed case studies that examine fate and transport of organic contaminants VOCs PFCs with data and interpretations presented separately These examples consider the chemical and mineralogical composition of rocks soils and waters in the affected system microbial influence on the decomposition of organic compounds the effect of reduction oxidation on transport of Fe As and Mn stable isotopes and synthetic compounds as tracers of flow geological factors that influence flow and implications for remediation The interdisciplinary approach and range of topics including environmental contamination of air water and soil as well as the processes that affect both natural and anthropogenic systems make it well suited for environmental geochemistry courses at universities as well as liberal arts colleges

Professional Learning in a School-Based Community of Science Teachers Wayne Melville, 2010-01-01 The ubiquitous science department occupies an unusual position in most secondary schools Traditionally they have been part of the organisational structure of schools with administrative responsibilities over room allocations teaching assignments and the management of laboratory equipment These are important roles but they only tell half the story Science teachers are more than members of an organisational structure They are also members of a science education community which is shaped by their shared understanding of science The science department as community also possesses a pivotal if undervalued role in teacher professional learning This book conceptualises professional learning as the engagement of teachers in a virtues based personal reflection and or public discourse around the episteme techne and phronesis in the spaces in between the

metaphors of understanding community meanings practice and identity As such it speaks to heads of science departments
school administrators and those with an interest in leadership within schools **Technical Abstract Bulletin** Defense
