

YORK Furnace Diagnostic Codes

Code

Description

This indicates that the normally open pressure switch contacts did not close in the usual manner. The control confirms these contacts are open at the beginning of each heat cycle. This would indicate a faulty pressure switch or miswiring. This indicates the normally open pressure switch contact did not close after the inducer was energized.

3 RED FLASHES

This could be caused by a number of problems: faulty inducer, blocked vent pipe broken pressure switch hose or faulty pressure switch.

4 RED FLASHES

This indicates that the main limit switch has opened its normally closed contacts. The control will operate the supply air blower and inducer. This condition may be caused by: dirty filter, improperly sized duct system, incorrect blower speed setting, incorrect firing rate or faulty blower motor. Also, this fault code could be caused by a blown fuse located on the control board.

Grosspietsch, M. Dal Cin, 2012-12-06 In the last decade of Computer Science development we can observe a growing interest in fault tolerant computing. This interest is the result of a rising number of applications where reliable operation of computing systems is an essential requirement. Besides basic research in the field of fault tolerant computing there is an increasing number of systems especially designed to achieve fault tolerance. It is the objective of this conference to offer a survey of present research and development activities in these areas. The second GI NTG GM Conference on Fault Tolerant Computing Systems has had a preparatory time of about two years. In March 1982 the first GI conference concerning fault tolerant computing systems was held in Munich. One of the results of the conference was to bring an organizational framework to the FTC community in Germany. This led to the founding of the common interest group Fault Tolerant Computing Systems of the Gesellschaft für Informatik GI, the Nachrichtentechnische Gesellschaft NTG and the Gesellschaft für Meß- und Regelungstechnik VDI VDE GMR in November 1982. At that time it was also decided to schedule a biannual conference on fault tolerant computing systems. One of the goals of this second conference is to strengthen the relations with the international FTC community, thus the call for papers was extended not only to German speaking countries but to other countries as well.
