Stereotactic Radiosurgery for the Treatment of Central Nervous System Meningiomas Michele Longhi, Enrico D. F. Motti, Antonio Nicolato, Piero Picozzi, 2021-08-02 Meningiomas are the most frequently reported neuro oncologic condition accounting for 12% to 30% of all primary intracranial tumors The first case of intracranial meningioma treated with stereotactic radiosurgery was reported by Backlund E O in 1971 Since then more than 200 000 meningiomas have been treated with stereotactic radiosurgery worldwide to date The large number of patients treated using this method is due to the fact that meningiomas are frequently located in critical areas and microsurgery is often associated with severe and permanent neurological complications This book discusses the advantages risks and limits of stereotactic radiosurgery relating to all regions of interest for a neuroradiosurgical approach for the treatment of central nervous system meningiomas Firstly it presents an introduction focusing on the state of the art It then discusses the physics imaging neurological and neuro oncological issues in multidisciplinary management Lastly it features a summary of results including the most recent published papers regarding all the locations involved in the stereotactic radiosurgery treatment as well as new approaches to meningiomas with particular reference to the hypofractionated

treatments Intended for anyone involved in the neuroradiosurgical treatment of brain diseases the book provides an up to date overview of the latest stereotactic radiosurgery treatment of central nervous system meningiomas **Principles of Adult Surgical Critical Care** Niels D. Martin,Lewis J. Kaplan,2016-10-08 This text provides a high level comprehensive but concise review of adult surgical critical care It can be used to review complex topics of critical illness in surgical patients as a reference tool or as preparation for a board examination It is focused on the surgical patient including high yield facts evidence based guidelines and critical care principles To remain succinct it concentrates on surgically relevant care Further the text is written with an expectation that reader already possesses a basic understanding of critical care pathophysiology and clinical practices such as those acquired during residency Organized by organ system each section contains several chapters addressing relevant disorders monitoring and treatment modalities and outcomes Principles of Adult Surgical Critical Care will be of use to intensivists caring for surgical patients regardless of parent training domain Additionally this work is intended to be used by surgical critical care fellowship trainees as well as other advanced practice providers such as nurse practitioners and physician assistants who provide care in ICUs and emergency departments alike **Irwin & Rippe's Manual of Intensive Care Medicine** Richard S. Irwin,Craig M. Lilly,James M. Rippe,2014 This reference text addresses recent developments including the larger role for ultrasound in critical care medicine It begins with a section on procedures and techniques followed by 15 sections covering organ system problems as well as palliative care legal and ethical issues and transplantation **Osteomyelitis** Mauricio S. B. Raksin,2022-09-01 This book reviews the common clinical scenarios that might trigger emergent consultation for neurosurgical intervention with attention to key components of the clinical interview and exam optimal diagnostic evaluation indications for and the goals of operative intervention perioperative considerations and strategies for complication mitigation This is not a surgical atlas but rather a road map for the journey to the operating room door The intent is to establish a systematic evidence based action plan for the patient presenting in neurologic crisis Each chapter opens with a relevant case vignette and then unfolds through uniform sections to tell the story of how one might approach the disease entity in question from initial request for consultation to definitive management highlighting steps of the decision making process What are the highest yield questions to ask during a focused interview What are the most pertinent objective exam findings What is the proper differential diagnosis What is the most appropriate and efficient plan for diagnostic evaluation with respect to laboratories and imaging Does this patient have an indication for emergent or urgent neurosurgical intervention If so what is

the goal of that intervention What are the most common potential complications of the proposed procedure and what steps might be taken to mitigate those risks Each chapter is punctuated by 3 5 teaching pearls summarizing these key elements The overall goal is to create a framework for assessment that might be applied in the emergency department the trauma bay or the ICU when a neurologic emergency arises The scope of the text encompasses not only cranial and spinal trauma but also entities such as shunt failure stroke aneurysmal subarachnoid hemorrhage pituitary apoplexy cauda equina syndrome and central nervous system infection that might require time sensitive intervention An additional section addresses issues requiring emergent neurosurgical response in the ICU setting including sudden neurologic worsening status epilepticus and abnormal clotting coagulopathy The text will not only serve as a valuable resource for those preparing to take the oral board exam but will also provide a targeted refresher for clinicians taking general neurosurgical call in the community as well as an educational reference for mid level practitioners and those in training who are serving as first responders on behalf of a neurosurgical service
