Your Home Technical Manual:

Green Australia Steve Lancaster, 2012 Green Australia A snapshot examines the ways in which Australians are attempting to reduce their ecological footprint both at home and at work In 2009 the CO2 Energy Emissions Index found that Australia had overtaken the USA to become the largest per capita emitter of greenhouse gases in the world a legacy of dependence on coal fired power stations the widespread adoption of conventional farming techniques heavy reliance on vehicles powered by fossil fuel dirty industrial practices and a growing mountain of waste Yet in recent years there has been a growing awareness that climate change is beginning to bite the recent drought and devastating floods suggesting that more extreme weather patterns are likely unless significant steps are taken to combat global warming Using case studies and up to date research this book demonstrates that although much more needs to be done if Australia is to secure a carbon neutral future some Green shoots are beginning to emerge

Nanotechnology Safety Madhulika Srikanth, Ramazan Asmatulu, 2013-06-12 The importance of construction and infrastructures cannot be undermined. Buildings, roads, bridges, dams, transportation systems and other infrastructures have brought the nations of the world together in many ways and made it a much smaller place. This chapter mainly talks about the world's construction industry and the advancement of new materials and technologies in the field of nanotechnology. It also discusses the shift toward sustainable development in the construction industry and how this development is applied by construction companies. Nanotechnology is pushing construction and infrastructure industries to use more efficient nanomaterials in order to make smarter building structures and infrastructures. However, the role of various nanomaterials in the construction industry has been debated. The widespread trend of using nanomaterials has been discouraged because of the biological and environmental health and safety impacts of using nanomaterials in construction and infrastructures. Governmental agencies are currently playing a major role in establishing rules and regulations that govern proper and efficient handling and use of nanomaterials. This study provides a look at the current situation and offers suggestions for continuing on our path toward sustainable development in the field.

Technology, Design and Process Innovation in the Built Environment Peter Newton, Keith Hampson, Robin Drogemuller, 2009-02-09 Buildings and infrastructure represent principal assets of any national economy as well as prime sources of environmental degradation. Making them more sustainable represents a key challenge for the construction planning and design industries and governments at all levels and the rapid urbanisation of the 21st century has turned this into a global challenge. This book embodies the results of a major research programme by members of the Australia Co-operative Research Centre for Construction Innovation and its global partners presented for an international audience of construction researchers, senior professionals and advanced students. It covers four themes applied to regeneration as well as to new build and within the overall theme of Innovation: Sustainable Materials and Manufactures focusing on building material products, their manufacture and assembly and the reduction of their ecological fingerprints, the extension of their service lives and their re-use and recyclability. It also explores the prospects for applying the principles of the assembly line. Virtual Design Construction and Management viewed as increasing sustainable development through automation, enhanced collaboration such as virtual design teams, real time BL performance assessment during design.
