Ethical Considerations for Digital Public Health Denise Veelo, David Černý, Josef Kure, Stephen Roberts, 2024-10-09

Public health guidelines and policies relating to digital public health are essential to ensuring the protection of the population. With this protection, there needs to be a consideration for the ethical challenges in public health. There is an obligation of care that comes with accessing health services as well as a need for understanding the role of Artificial Intelligence and Machine Learning. As health challenges become more complex, there is a growing need to identify and address questions on existing public health policies, codes of conduct, and guidelines relating to the provision of medical care across the globe in order to strengthen our understanding of the ethics of public health practices.

Applications of Advanced Ceramics in Science, Technology, and Medicine K. Chandra Babu Naidu, N. Suresh Kumar, 2020-10-02

Applications of Advanced Ceramics in Science, Technology, and Medicine explores a broad range of advanced ceramic materials and their innovative applications in distinct fields. Chapters cover applications such as actuators, energy storage, environmental health and monitoring, 3D printing, electronics, biomedical engineering, and EMI shielding. Chapters provide readers with an overview of the structural and fundamental properties, synthesis strategies, and versatile applications of advanced ceramic materials and their composites. The information in the volume will be beneficial for students, research scholars, faculty members, and R & D specialists working in the area of material science, nanotechnology, solid state science, chemical engineering, power sources, and renewable energy storage.

Domain Decomposition Methods in Science and Engineering XVI Olof Widlund, David E. Keyes, 2007-07-30. Domain decomposition is an active interdisciplinary research area concerned with the development, analysis, and implementation of coupling and decoupling strategies in mathematical and computational models of natural and engineered systems. Since the advent of hierarchical distributed memory computers, it has been motivated by considerations of concurrency and locality in a wide variety of large-scale problems, continuous and discrete. Historically, it emerged from the analysis of partial differential equations, beginning with the work of Schwarz in 1870. The present volume sets forth new contributions in areas of numerical analysis, computer science, scientific and industrial applications, and software development.
