Kottler, 2010-12 How do we explain the lurid fascination that most people experience when confronted by real or simulated acts of violence murder horror and crime This is the subject examined in this candid assessment of our dark vicarious thrills Based on a series of interviews with perpetrators victims and consumers of violence including several celebrities the author of a best selling book on serial killers explores what there is about this subject that draws such a wide audience Unlike many other books that attempt to probe the murky psyches of deviant individuals this book focuses on normal average people who despite themselves enjoy getting close to the most forbidden perverse side of destruction and evil The persons interviewed range from homicide detectives and emergency room personnel to a heavyweight boxer and groupies of serial killers on death row The author considers ideas from a variety of theories and research to explain our responses to violence raises guestions about the shifting line between normal and abnormal evaluates the confusion and ambivalence that many people feel when witnessing others suffering and suggests future trends in society s attitudes toward violence Masters of Mathematics Robert A. Nowlan, 2017-05-13 The original title for this work was Mathematical Literacy What Is It and Why You Need it The current title reflects that there can be no real learning in any subject unless questions of who what when where why and how are raised in the minds of the learners The book is not a mathematical text and there are no assigned exercises or exams It is written for reasonably intelligent and curious individuals both those who value mathematics aware of its many important applications and others who have been inappropriately exposed to mathematics leading to indifference to the subject fear and even loathing These feelings are all consequences of meaningless presentations drill rote learning and being lost as the purpose of what is being studied Mathematics education needs a radical reform There is more than one way to accomplish this Here the author presents his approach of wrapping mathematical ideas in a story To learn one first must develop an interest in a problem and the curiosity to find how masters of mathematics have solved them What is necessary to be mathematically literate It s not about solving algebraic equations or even making a geometric proof These are valuable skills but not evidence of literacy We often seek answers but learning to ask pertinent questions is the road to mathematical literacy Here is the good news new mathematical ideas have a way of finding applications This is known as the unreasonable effectiveness of mathematics Critical **Incidents in School Counseling** Tarrell Awe Agahe Portman, Chris Wood, Heather J.
