This book provides a state-of-the-art overview of the changes and development of the civil international aircraft aviation industry. It offers a fully up-to-date account of the international developments and structure in the aircraft and aviation industries from a number of perspectives which include economic, geographical, political, and technological points of view. The aircraft industry is characterized by very complex high technology products produced in relatively small quantities. The high technology requirements necessitate a high level of R & D. In no other industry is there more of interdependence and cross-fertilisation of advanced technology. Consequently, most of the world's large aircraft companies and technology leaders have been located in Europe and North America. During the last few decades, many developing countries have tried to build up an internationally competitive aircraft industry. The authors study a number of important issues including the political economy of the aircraft industry, globalization in this industry, innovation, newly industrializing economies, and the aircraft industry. This book also explores regional and large aircraft transformation of the aviation industry in Central and Eastern Europe, including engines, airlines, airports, and airline safety. It will be of great value to students and to researchers seeking information on the aircraft industry and its development in different regions. *Quantitative Understanding of Biosystems* Thomas M.
