Accessible Design Review Guide Robert R. Grist,1996 A new and innovative approach to both designing and analyzing proposed and existing facilities for ADAAG compliance With its emphasis on physical accessibility the Americans with Disabilities Act Accessibility Guidelines ADAAG have far reaching implications for the design or renovation of virtually all public use buildings and sites in the United States Yet there has been little guidance on how to design and review the drawings and specifications of an existing or proposed facility to assess its ADAAG compliance This invaluable reference

provides such guidance at last for architects interior designers landscape architects engineers builders planners facilities managers specification writers construction code officials teachers and students as well as individuals concerned with access issues The authors present the ADAAG in an easily understandable format grouping ADAAG criteria into detailed checklists for specific interior and exterior spaces such as offices classrooms retail shops restaurants restrooms and parking garages This sensible approach makes the review process of any room building or site highly manageable For additional convenience the presentation parallels the design process from schematic design through construction documents including detail schedule and specification review Complete with review forms checklists graphics and other information necessary to ensure ADAAG compliance this thorough guide will prove invaluable to everyone involved with the design or retrofit of accessible buildings and sites

Parts and Wholes John Chapman, Biserka Gaydarska, Ana Raduncheva, Bistra Koleva, 2007 This is a highly original work that attempts to take fragmentation studies further towards integrating archaeology social anthropology and material culture and concerns the relationship between whole objects and broken ones The authors construct a new fragmentation premise and examine its implications for the Balkans in the Neolithic using case studies taken from the Balkans and Greece Key issues covered include a biographical method of considering objects and their relation to the creation of personhood methodological issues of site formation a questioning of the assumption that excavated data is a more or less accurate reflection of the operation of past social practices and a discussion of what happened to pieces missing from an assemblage It concludes by seeking to put Balkan prehistory back together again by looking at variations in social practices and the construction of personhood at different socio spatial levels
