Proceedings of 4th International Conference on Applied Numerical Modeling, 1985 *DIANA Computational Mechanics '94* Ger M.A. Kusters, Max A.N. Hendriks, 2012-12-06 Advances in computational mechanics can only be achieved on the basis of fruitful discussion between researchers and practising engineers This has been achieved in the present publication which contains all the papers presented at the first International DIANA Conference on Computational Mechanics Nearly all papers show the results of calculations achieved with the DIANATM Finite Element System Broadly the book follows the line of research from the material level via the element level to the structural level But it should be emphasised that much current research passes from one level to the other and such an interaction is also reflected here The following domains are treated hyper elasticity visco plasticity and cracking enriched damaging continua models material experiments vs computational models stochastic approaches fluid structure interactions element technology geometrical nonlinearity and structural instability nonlinear dynamics solution procedures

Structures for Nuclear Facilities M.Y.H. Bangash, 2011-08-05 This book provides a general introduction to the topic of buildings for resistance to the effects of abnormal loadings The structural design requirements for nuclear facilities are very unique In no other structural system are extreme loads such as tornadoes missile and loud interaction earthquake effects typical in excess of any recorded historical data at a site and postulated system accident at very low probability range explicitly considered in design It covers the whole spectrum of extreme load which has to be considered in the structural design of nuclear facilities and reactor buildings the safety criteria the structural design the analysis of containment Test case studies are given in a comprehensive treatment Each major section contains a full explanation which allows the book to be used by students and practicing engineers particularly those facing formidable task of having to design complicated building structures with unusual boundary conditions
