part also briefly describes the evolution of automotive technologies and market including production and development processes The second part deals with the description and function analysis of all car subsystems such as vehicle body chassis including wheels suspensions brakes and steering mechanisms diesel and gasoline engines electric motors batteries fuel cells hybrid propulsion systems driveline including manual and automatic gearboxes This part addresses also many non technical issues that influence vehicle design and production such as social and economic impact of vehicles market regulations particularly on pollution and safety In spite of the difficulty in forecasting the paths that will be taken by automotive technology the third part tries to open a window on the future It is not meant to make predictions that are likely to be wrong but to discuss the trends of automotive research and innovation and to see the possible paths that may be taken to solve the many problems that are at present open or we can expect for the future The book is completed by two appendices about the contribution of computers in designing cars particularly the car body and outlining fundamentals of vehicle mechanics including aerodynamics longitudinal acceleration and braking and transversal path control motion
