The global economy has presented both a challenge and an opportunity for organizations to better manage their supply chains. An organization's supply chain has come to be viewed as more like a supply web because an organization has a complex network of customers, distributors, wholesalers, suppliers, first tier, second tier, and sometimes third tier, and includes logistics, transportation, and warehousing. This primer draws content from experts in the field and was blended into a useful tool for you to use managing your organization's supply chain. It covers key supply chain topics like supply chain and logistics management processes, defining organizational needs and requirements, identifying supply network sources, building relationships, awarding contracts, and managing supplier performance. Creating an effective supply chain is key to staying ahead in today's complex global economy. This primer provides the tools, guidance, and examples to help maximize business performance and create competitive advantage for your organization.

An Annotated Bibliography Review** Mutinda Jackson,2018-07-17 Academic Paper from the year 2018 in the subject Business economics Business Management Corporate Governance grade A Kenyatta University course Business Management language English abstract Over the past years Supply Chains SC and Supply Chain Management SCM have been noted to play a crucial role in corporate efficiency not to mention that they have immensely attracted the attention of several scholars Due to the cropping up of liberalization as well as the globalization of the international trade the production factors involved in sourcing and consumer products from destinations across the globe have enhanced the interdependence between the producers and wholesalers on the global supply chains Accordingly the literature behind supply chain management has offered a number of variations on the same theme in supply chain definition In simple terms supply chain management can be defined as a system of suppliers retailers customers distributors and even manufacturers whereby the products flow downstream from the suppliers to the consumers while information flows in both directions On the other hand a supply chain can be defined as a network of facilities as well as distribution options that operate to procure materials and transform these materials into intermediate and finished products alongside distributing these finished products to consumers Evidently supply chains exist in the service and even manufacturing enterprises even though the chain s complexity may greatly vary from firm to firm and industry to industry Concise Introduction to Global Supply Chain Management Masaaki Kotabe,2024-03-14 This Concise Introduction provides clear insights into the various issues involved in the global supply chain Covering materials procurement sourcing and physical distribution Masaaki Kotabe examines the global supply chain from a strategic perspective while also addressing the sustainability concerns which arise in this arena *Supply Chain Management* Christine Harland,2024-04-27 The book focuses on the development of the concept of supply chain

management and the current state of knowledge on supply chain structure and infrastructure. It draws together knowledge from materials management, purchasing and supply management, operations management, industrial marketing and logistics perspectives as well as industrial economics, organizational behaviour, systems thinking and strategic management. Three key conceptual themes are developed: 1 the recognition of supply chain management as a multi-level endeavour, 2 the increasing aspirations for supply chain management to be a strategic not just an operational concept, and 3 the view of the supply chain management research community as an academic discipline. The book also examines supply chain structure in terms of dyads, triads, chains, networks, supply bases, supply systems and supply markets. Supply chain infrastructure is discussed in terms of processes, roles and behaviours and draws on extensive international empirical research. Challenges for researchers are addressed such as interconnectedness in complex supply systems, the need for greater resilience and how public policy and public value can be impacted by research. It concludes with a co-authored chapter that examines the potential future identity of supply chain management.

Supply Chain-Based Category Strategies for Global Supply Networks Nikos Moraitakis, 2017-07-26. From a supply chain perspective, often big differences exist between global raw material suppliers' approaches to supply their respective local markets. The progressing complexity of large centrally managed global supply networks and their often unknown upstream ramifications increase the likelihood of undetected bottlenecks and inefficiencies. It is therefore necessary to develop an approach to strategically master the upstream complexity of such networks from a holistic perspective in order to align regional competitive priorities and supply chain structures. The research is set in the context of polyamide engineering thermoplastics in the automotive

industry Based on an initial industry analysis and a literature review a conceptual framework is developed The framework is matched with existing empirical and theoretical literature as well as multiple case study analyses in the relevant supply market and a centrally managed global supply network As a result strategic group theory is transferred into the supply network management context to allow for the consideration of upstream supply chain structures in the category strategy development process The proposed approach introduces strategic groups of supply chains as a segmentation criterion for complex global supply networks which enables the network wide alignment of competitive priorities flexibility requirements and partnerships with suppliers Supply chain based category strategies can effectively reduce the complexity firms are facing in this context The results of this research are applicable for certain types of global supply networks and can be used for network alignment and strategy development The approach can furthermore generate valuable insights useable for negotiation support with suppliers
