Reporting with Visual Studio

Every .NET application handling data will sooner or later require an option to display said data in a user friendly manner. That's where report generators come to play. They offer quick and convenient ways to connect to different data source types, straight from within Visual Studio. With the report designer, layout templates are created and adapted and finally printed to a wide selection of different export formats like PDF, XHTML, Microsoft Excel or Microsoft Word. In many cases, it's desired to have the designer made available to the application's end users as well.

Binding to Common .NET Data Sources

Before starting with a report, data need to be available. Since the application usually uses data in a specific format, the component should be able to go right from there. This requires the broadest possible support for a wide variety of data formats.
