

Teacher Guide: Archimedes' Principle

Learning Objectives

Students will:

- Verify that the mass of a floating body is equal to the mass of displaced liquid.
- Experimentally predict mass for pieces of glass submerged completely with water and in oil.
- Understand how gravity and the buoyant force influence motion and support of a boat.
- Explain Archimedes' principle.
- Apply Archimedes' principle to fluid situations.

Background

Archimedes' principle: buoyant force, density, pressure, mass, volume, weight

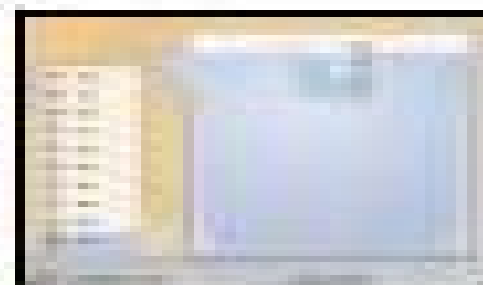

Lesson Overview

Students are introduced why a hot air balloon floats and a boat sails. The balloon floats because forces of gravity pulling on it are balanced against buoyant force pushing it up. It is held up by Archimedes' Principle.

The Archimedes' Principle Demo shows another "hot" floating object. Students are introduced to the mass, weight, the water displacement, and buoyant force of the object. In the next step, in the liquid, the displaced liquid is shown to be equal in mass to the object. The boat floats because buoyant force equals the weight of the boat, and that force is due to displaced liquid.

The following questions should be discussed after activities are completed:

- Activity 1: ... Students verify that the mass of a boat is equal to the mass of displaced liquid.
- Activity 2: ... Students determine whether a rectangular block will sink or float.
- Activity 3: ... Students explain how the forces of gravity and buoyancy affect a boat.
- Extension: ... Students explain forces on a hot air balloon.

Suggested Lesson Sequence

1. Pre-Demo activity: Predicted outcome All ... All correct.
Students explain why a hot air balloon floats. They are introduced to the forces of gravity and buoyancy. The buoyant force is shown to be equal to the weight of the displaced liquid.
2. Demo: The buoyant force of a hot air balloon is shown to be equal to the weight of the displaced liquid. The buoyant force is shown to be equal to the weight of the displaced liquid. The buoyant force is shown to be equal to the weight of the displaced liquid.
3. Activity 1: ... Students verify that the mass of a boat is equal to the mass of displaced liquid. The buoyant force is shown to be equal to the weight of the displaced liquid. The buoyant force is shown to be equal to the weight of the displaced liquid.
4. Activity 2: ... Students determine whether a rectangular block will sink or float. The buoyant force is shown to be equal to the weight of the displaced liquid. The buoyant force is shown to be equal to the weight of the displaced liquid.
5. Activity 3: ... Students explain how the forces of gravity and buoyancy affect a boat. The buoyant force is shown to be equal to the weight of the displaced liquid. The buoyant force is shown to be equal to the weight of the displaced liquid.
6. Extension: ... Students explain forces on a hot air balloon. The buoyant force is shown to be equal to the weight of the displaced liquid. The buoyant force is shown to be equal to the weight of the displaced liquid.
