Layered Double Hydroxides Giuseppe Prestopino, Giuseppe Arrabito, 2021-04-14 Very few materials have attracted so much attention in recent years both from researchers and industry as layered double hydroxides LDHs have LDHs which are also referred to as anionic clays or hydrotalcites are a wide class of inorganic ionic lamellar clay materials consisting of alternately stacked positively charged metal hydroxide layers with intercalated charge balancing anions in hydrated interlayer regions Their unique properties such as their extremely high versatility in chemical composition and intercalation ability extraordinary tuneability in composition as well as morphology good biocompatibility and high anion exchangeability have triggered immense interdisciplinary interest for their use in many different fields of chemistry biology medicine and physics Indeed the applications of LDHs are constantly growing LDHs in the form of aggregated lamellar clusters exfoliated single layer nanosheets or hierarchical films of interconnected nanoplatelets can be effectively used as nanoscale vehicles in drug delivery heterogeneous catalysts and supports for molecular catalysts ion exchangers and adsorbents solid electrolytes or fillers in electrochemistry for the fabrication of superhydrophobic surfaces water treatment and purification and the synthesis of functional thin films This book gathers the contributions to the Special Issue Layered Double Hydroxides of Crystals which includes two review articles and seven research papers

Practical Aspects of Chemical Engineering Marek Ochowiak, Szymon Woźniowski, Piotr Tomasz Mitkowski, Michał Doligalski, 2020-05-08 This book discusses chemical engineering and processing presenting selected contributions from PAIC 2019 It covers interdisciplinary technologies and sciences like drug delivery systems nanoscale technology environmental control modelling and computational methods The book also explores interdisciplinary aspects of chemical and biochemical engineering interconnected with process system engineering process safety and computer science

Novel Biomaterials for Regenerative Medicine Heung Jae Chun, Kwideok Park, Chun-Ho Kim, Gilson Khang, 2018-10-24 This book explores in depth a wide range of new biomaterials that hold great promise for applications in regenerative medicine The opening two sections are devoted to biomaterials designed to direct stem cell fate and regulate signaling pathways Diverse novel functional biomaterials including injectable nanocomposite hydrogels electrosprayed nanoparticles and waterborne polyurethane based materials are then discussed The fourth section focuses on inorganic biomaterials such as nanobioceramics hydroxyapatite and titanium dioxide Finally up to date information is provided on a wide range of smart natural biomaterials ranging from silk fibroin based scaffolds and collagen type I to chitosan mussel inspired biomaterials and natural polymeric scaffolds This is one of two books to be based on contributions from leading experts that were delivered at the 2018 Asia University Symposium on Biomedical Engineering in Seoul Korea the companion book examines in depth the latest enabling technologies for regenerative medicine

Eicosanoids in Cancer Emanuela Ricciotti, Nune Markosyan, Emer Smyth, Paola Patrignani, 2021-10-25 Orchid Biochemistry Jen-Tsung Chen, 2021-08-18 Orchids are fascinating with attractive flowers that sell in the markets and an

increasing demand around the world. Additionally, some orchids are edible or scented and have long been used in preparations of traditional medicine. This book presents recent advances in orchid biochemistry, including original research articles and reviews. It provides in-depth insights into the biology of flower pigments, floral scent formation, bioactive compounds, pollination, and plant-microbial interaction, as well as the biotechnology of protocorm-like bodies in orchids. It reveals the secret of orchid biology using molecular tools, advanced biotechnology, multi-omics, and high-throughput technologies, and offers a critical reference for the readers. This book explores the knowledge about species evolution using comparative transcriptomics, flower spot patterning involving the anthocyanin biosynthetic pathways, the regulation of flavonoid biosynthesis, which contributes to leaf color formation, gene regulation in the biosynthesis of secondary metabolites and bioactive compounds, the mechanism of pollination involving the biosynthesis of semiochemicals, gene expression patterns of volatile organic compounds, the symbiotic relationship between orchids and mycorrhizal fungi, techniques using induction, proliferation, and regeneration of protocorm-like bodies, and so on. In this book, important or model orchid species were studied, including *Anoectochilus roxburghii*, *Bletilla striata*, *Cymbidium sinense*, *Dendrobium officinale*, *Ophrys insectifera*, *Phalaenopsis Panda*, *Pleione limprichtii*. *Inflammation in the Pathogenesis of COVID-19* Pietro Ghezzi, Gilles

Ben James Lee, Oliver R. Gibson, Charles Douglas Thake, James David Cotter, Mike Tipton, John Alan Hawley, 2019-05-15 **The Mitotic Spindle** Tomomi Kiyomitsu, 2024-12-01

This detailed volume presents methods for investigating mitotic spindle assembly, chromosome segregation, and cytokinesis. Split into six parts, the book examines advanced microscopes, spatiotemporal manipulation of the spindle and target molecules, quantitative live imaging, screening, centrosome manipulation and purification, and spindle positioning in synthetic or complicated contexts. Written for the highly successful *Methods in Molecular Biology* series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step and readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and up-to-date, *The Mitotic Spindle: Methods and Protocols* serves as an ideal guide for researchers seeking a better system-level understanding of the mitotic spindle. Chapters 4, 12, 17, and 19 are available open access under a Creative Commons Attribution 4.0 International License via link.springer.com. **Liquid Biopsy** Catherine

Alix-Panabieres, George Calin, Klaus Pantel, 2022-11-08 *WHO Guidelines on Tularemia* World Health

Organization, 2007-12-15 Tularemia is a bacterial zoonotic disease of the northern hemisphere. The bacterium *Francisella tularensis* is highly virulent for humans and a range of animals, such as rodents, hares, and rabbits. Humans can infect themselves by direct contact with infected animals, by arthropod bites, by ingestion of contaminated water or food, or by inhalation of infective aerosols. There is no human-to-human transmission. In addition to its natural occurrence, *F. tularensis* evokes great concern as a potential bioterrorism agent. *F. tularensis* subspecies *tularensis* is one of the most infectious

pathogens known in human medicine In order to avoid laboratory associated infection safety measures are needed and consequently clinical laboratories do not generally accept specimens for culture However since clinical management of cases depends on early recognition there is an urgent need for diagnostic services This first edition of WHO Guidelines on tularaemia provides background information on the disease describes the current best practices for its diagnosis and treatments in humans suggests measures to be taken in case of epidemics and provides guidance on how to handle *F. tularensis* in the laboratory The target audience includes clinicians laboratory personnel public health workers veterinarians and any other person with an interest in zoonoses Protein Termini Part B, 2026-02-01 Protein Termini Part B **Plant**

Proteomic Research 3.0 Setsuko Komatsu, Jesus V. Jorriñ-Novo, 2021-04-29 The Special Issue Plant Proteomics 3.0 was conceived in an attempt to address the recent advancements in as well as limitations of current proteomic techniques and their diverse applications to attain new insights into plant molecular responses to various biotic and abiotic stressors and the molecular bases of other processes Proteomics focus is also related to translational purposes including food traceability and allergen detection In addition bioinformatic techniques are needed for more confident identification quantitation data analysis and networking especially with non model or orphan plants including medicinal and meditational plants as well as forest tree species This Special Issue contains 23 articles including four reviews and 19 original papers Modifications and targeting of protein termini Part B, 2023-07-31 Modifications and Targeting of Protein Termini Part B Volume 686 in the Methods in Enzymology serial highlights new advances in the field with this new volume presenting interesting chapters on a variety of timely topics including In vitro production of N degron fused proteins and its application Identification of N degrons and N recognins using peptide pull downs combined with quantitative mass spectrometry based proteomics Monitoring ADO dependent proteolysis in cells using fluorescent reporter proteins Monitoring the interactions between N degrons and N recognins of the Arg N degron pathway Characterization and chemical modulation of p62 SQSTM1 Sequestosome 1 as an autophagic N recognin of the Arg N degron pathway Other chapters cover Analysis of higher plant N degron pathway components and substrates via expression in *S. cerevisiae* Building libraries to dissect terminal degrons with fluorescent timers Affinity isolation and biochemical characterization of N degron ligands using the N recognin ClpS Probing the effects of N terminal acetylation on synuclein structure aggregation and toxicity Increasing the coverage of the N terminome with Lys N Amino Terminal enrichment LATE and more Provides the authority and expertise of leading contributors from an international board of authors Presents the latest release in Methods in Enzymology serials Updated release includes the latest information on Modifications and Targeting of Protein Termini *6th International Conference on Nanotechnologies and Biomedical Engineering* Victor Sontea, Ion Tiginyanu, Serghei Railean, 2023-09-11 This book reports on advances in fundamental and applied research at the interface between nanotechnology and biomedical engineering Gathering peer reviewed contributions to the 6th International Conference on Nanotechnologies and Biomedical Engineering

ICNBME held on September 20 23 2023 in Chisinau Republic of Moldova this first volume of the proceedings focuses on nanotechnologies and nano biomaterials and their applications in medicine With a good balance of theory and practice the book offers a timely snapshot of multidisciplinary research at the interface between physics chemistry biomedicine materials science and engineering

Countering Hybrid Threats Against Critical Infrastructures Dorin Radu,Mirsada Hukić,Ashok Vaseashta,2025-04-30 This proceedings volume presents a collection of articles from key practitioners from relevant areas with experience in critical infrastructure The authors acknowledge that the responsibility for critical infrastructure protection is primarily a matter of international importance hence a high degree of cross border and cross sectoral interdependencies must be coordinated or where appropriate legally harmonized efforts at the international level including the smooth functioning of the internal policies The book focuses on countering hybrid threats that render critical infrastructures vulnerable An understanding of such threats will render critical infrastructure safe secure and resilient The protection of national critical infrastructures as well as of the functions and services critical to the proper functioning of society is a key priority and requires a new unique and strategic approach Work in this direction must consider the strong interdependencies between the various critical functions and services including financial services the key role of the private sector the changing security environment and emerging risks both in the physical and cyber fields In addition to legal requirements agreements should be promoted with private sector infrastructure and service owners and operators to ensure the continuity of and access to critical services including beyond force majeure by ensuring an acceptable level of preparedness to respond all relevant threats as well as the flexibility to address and mitigate the effects of low probability high impact events

Multi-targeted Natural Products as Cancer Therapeutics: Challenges and Opportunities, Volume I, 2nd edition Jiang-Jiang Qin,Wei-Dong Zhang,Huizi Jin,Sanjay K. Srivastava,2024-01-11 This Research Topic is part of a series with Multi targeted Natural Products as Cancer Therapeutics Challenges and Opportunities

Volume II Cancer remains a leading cause of disease related deaths worldwide despite recent advances in our understanding of cancer initiation progression and metastasis Chemotherapy and radiotherapy have been used as standard non surgical treatments of human cancer for decades however the survival rates of patients with cancer especially those with advanced diseases are still very low due to the high toxicities of these treatments as well as the severe side effects This fact has motivated researchers to discover new cancer therapeutics with minimum side effects which intensively promotes the rapid development of single specific molecule targeted therapies SSMTT Many efforts have been made in world wide cancer drug discovery research and several single molecule targeted therapies have been successfully developed Unfortunately most of the investments failed because cancer is a genetic disease and always harbors multiple alternations of molecules or genes at the genomic genetic and epigenetic levels The inhibition of a single molecule or signaling pathway by SSMTT frequently results in a hyperactive compensation of other cancer related molecules and signaling pathways as well as the subsequent development of drug resistance Therefore identifying multi targeted therapies i e drugs that are able to target multiple cancer related genes proteins or signaling pathways is a more promising way to success in developing new cancer therapeutics Natural products especially those from traditional Chinese medicine and folk remedies in other countries are an extraordinarily important source for new drug discovery over the past decades Of note many natural products have often been demonstrated to target several crucial genes or proteins in cancer related signaling networks and exert synergistic effects For example Japonicone A a dimeric sesquiterpenoid from the medicinal plant *Inula japonica* has been found to inhibit tumor growth and metastasis by dually targeting the TNF NF B and p53 MDM2 signaling pathways Traditionally researchers have believed that the multi targeting mechanisms of natural products have limited their use in cancer treatment due to the low specificity and potential side effects The growing interest in developing multi targeted cancer therapies may provide another golden opportunity to develop natural products as new cancer therapeutics Nevertheless critical investigations for a comprehensive understanding of the molecular mechanisms of natural products also mean more challenges Our long term goals are to fully understand the molecular targets and mechanisms of action of anticancer natural products and develop them as novel cancer preventive and therapeutic agents The specific goal of this Research Topic is to bring together the recent findings of newly identified anticancer natural products especially those with multiple molecular targets Papers Original Research articles or Reviews which discuss the in vitro and in vivo efficacy and pharmacological and toxicological properties of natural products are also welcome to be submitted Guidelines for the conception and review of submissions As many anticancer drugs working as cytotoxic compounds have non selective effects annihilating their potential therapeutic benefits manuscripts are advised to provide evidence of a significant selectivity towards cancer cells vs healthy cells Specifically if the studied anticancer drug or modality does not target an oncogenic pathway the authors should make every effort possible to prove that the cytotoxic or cytostatic effects they have identified exhibit selectivity for cancer cells ideally 1

log difference in EC₅₀ or IC₅₀ vs non malignant cells eg fibroblasts or primary culture of cells The authors should also demonstrate the applicability of their anticancer modalities on a minimum of two well authenticated cancer cell lines ideally originating from distinct organs tissues For manuscripts dealing with plant extracts or other natural substances compounds the composition and the stability of the study material must be described in sufficient detail In particular for extracts chromatograms with characterization of the dominating compound s are requested The level of purity must be proven and included Please refer to the Four Pillars of Best Practice in Ethnopharmacology a subset of which concerning general standards in natural product research are applied to all such studies in all sections of Frontiers in Pharmacology

Tecan Sunrise User Manual: Bestsellers in 2023 The year 2023 has witnessed a remarkable surge in literary brilliance, with numerous captivating novels captivating the hearts of readers worldwide. Lets delve into the realm of top-selling books, exploring the fascinating narratives that have enthralled audiences this year. Tecan Sunrise User Manual : Colleen Hoover "It Ends with Us" This touching tale of love, loss, and resilience has gripped readers with its raw and emotional exploration of domestic abuse. Hoover expertly weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can succeed. Tecan Sunrise User Manual : Taylor Jenkins Reids "The Seven Husbands of Evelyn Hugo" This captivating historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reids captivating storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Discover the Magic : Delia Owens "Where the Crawdads Sing" This mesmerizing coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens weaves a tale of resilience, survival, and the transformative power of nature, entrancing readers with its evocative prose and mesmerizing setting. These bestselling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of compelling stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a brilliant and suspenseful novel that will keep you guessing until the very end. The novel is a warning tale about the dangers of obsession and the power of evil.
