Technology and Oligopoly Capitalism Luis Suarez-Villa, 2023-04-14 Technology and Oligopoly Capitalism is a major contribution to our understanding of how technology oligopolies are shaping America s social economic and political reality Technology oligopolies are the most powerful socioeconomic entities in America From cradle to grave the decisions they make affect the most intimate aspects of our lives how we work what we eat our health how we communicate what we know and believe whom we elect and how we relate to one another and to nature Their power over markets trade regulation and most every aspect of our governance is more intrusive and farther reaching than ever They benefit from tax breaks government guarantees and bailouts that we must pay for and have no control over Their accumulation of capital creates immense wealth for a minuscule elite deepening disparities while politics and governance become ever more subservient to their power They determine our skills and transform employment through the tools and services they create as no other organizations can They produce a vast array of goods and services with labor marketing and research that are more intrusively controlled than ever as workplace rights and job security are curtailed or disappear Our consumption of their products and their capacity to promote wants is deep and far reaching while the waste they generate raises concerns about the survival of life on our planet And their links to geopolitics and the martial domain are stronger than ever as they influence how warfare is waged and who will be vanquished Technology and Oligopoly Capitalism s critical multidisciplinary perspective provides a systemic vision of how oligopolistic power shapes these forces and phenomena An inclusive approach spans the spectrum of technology oligopolies and the ways in which they deploy their power Numerous previously unpublished ideas expand the repertory of established work on the topics covered advancing explanatory quality to elucidate how and why technology oligopolies operate as they do the dysfunctions that accompany their power and their effects on society and nature This book has no peers in the literature in its scope the unprecedented amount and diversity of documentation the breadth of concepts and the vast number of examples it provides Its premises deserve to be taken into account by every student researcher policymaker and author interested in the socioeconomic and political dimensions of

Dena M.,2016-11-18 As the nature of global malnutrition changes there is a growing need and increasing urgency for more and better information about food consumption and dietary patterns The past two decades have seen a dramatic increase in the number availability and analysis of the food consumption data collected in a variety of multipurpose household surveys referred to collectively as household consumption and expenditure surveys HCESs These surveys are heterogeneous and their quality varies substantially by country Still they share some common shortcomings in their measurement of food consumption nutrient intakes and nutrition status that undermine their relevance and reliability for purposes of designing and implementing food policies and programs This review crafts a strategic approach to the unfinished global agenda of improving HCESs collection of food consumption data Starting with the priority studies recommended by a 100 country HCES review Smith Dupriez and Troubat 2014 it focuses on a strategic subset of those studies that deal most directly and exclusively with the measurement of food and that are of fundamental importance to all HCES stakeholders in low and middle income countries Drawing from the literature this study provides a more detailed more circumspect justification as to why these particular studies are needed while identifying key hypotheses explaining why these studies are of growing urgency and demonstrating why now is a propitious time for undertaking them The review also identifies important study design considerations while pointing out potential challenges to successful implementation stemming from technical capacity economic administrative and political considerations Six key studies are rank ordered from a global perspective as follows taking into account 1 the likely shared consensus that a topic is an important source of measurement error in estimating consumption 2 the perceived urgency of the need for addressing a particular source of measurement error 3 the perceived likelihood of success that is that the efforts will improve the accuracy of measurement 4 whether or not the study entails modifying the questionnaire 5 the ease with which a study may begin and 6 the extent to which the study is independent of necessary negotiations with existing HCES stakeholders because of the types of changes it is likely to entail in either the questionnaire or the way the data have traditionally been processed
