### DESCRIPTION OF OPERATION - HYDRAULIC PUMP AND FILTER

#### Fig. 10-04

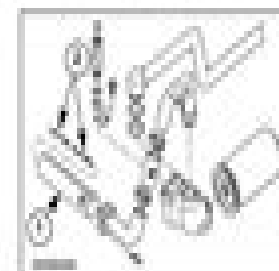

The hydraulic pump, 1, is mounted on the right side of the engine and is driven by the engine's crank gear mounted on the front of the engine block.

The hydraulic pump is a gear type pump and, with exception of replacing the seal, is not serviceable.

A screen type pump filter is mounted inside the rear differential case and is adjusted by changing the internal float from the differential case and removing the valve assembly, 1, from the top end of the differential housing.

The screen type pump filter has an inspection door, 2, in the filter to check any possible particles in the oil.

A suction type filter, 1, is located in the center of the right side of the tractor, near the rear axle differential case. The filter is necessary to remove the complete particle assembly. The filter should be replaced after the first 50 hours of use and every 500 hours of use thereafter.
