Groth, 2012-08-10 A journey into the vibrant and intriguing world of mathematics education Teaching Mathematics in Grades 6 12 explores how research in mathematics education can inform teaching practice in grades 6 12 The author shows secondary mathematics teachers the value of being a researcher in the classroom by constantly experimenting with methods for developing students mathematical thinking and then connecting this research to practices that enhance students understanding of the material The chapters in Part I introduce secondary teachers to the field of mathematics education with cross cutting issues that apply to teaching and learning in all mathematics content areas The chapters in Part II are devoted to specific mathematics content strands and describe how students think about mathematical concepts The goal of the text is to have secondary math teachers gain a deeper understanding of the types of mathematical knowledge their students bring to grade 6 12 classrooms and how students thinking may develop in response to different teaching strategies **The Mathematics Teacher**, 1924 Enhancing Primary Mathematics Teaching Ian Thompson, 2003-09-16 This book is the third in an important trilogy of edited collections on the teaching and learning of primary mathematics To each book the editor Ian Thompson has attracted a team of expert contributors and himself set the characteristically high standard of writing and clarity When in 10 or 20 years time people want to know about the state of English primary mathematics at the turn of the 21st century they will turn to this volume You would do well to read it now Mathematics in Schools This is the third book in the popular series edited by Ian Thompson that brings together an impressive array of contributing authors Current issues are discussed in an informed but concise way that makes research accessible to the wider community of mathematics educators Julia Anghileri University of Cambridge This book explores the effect that the National Numeracy Strategy and its successor the Primary Strategy have had on the way in which mathematics is taught in primary schools Prominent contributors examine the Strategies recommendations from the perspective of their own research areas or interests and discuss the issues involved including Ideas for extending current practice Suggestions of important aspects of mathematics teaching that are being given little or no emphasis Alternative approaches that could be integrated into current practice

Aspects of current practice that need to take account of recent research findings or emerging issues Each chapter discusses implications for teaching and learning primary mathematics The book will be particularly useful for trainees practising teachers mathematics coordinators and numeracy consultants Contributors Mundher Adhami Mike Askew Carol Aubrey Margaret Brown Ann Dowker Rosemary Hafeez Steve Higgins Keith Jones Lesley Jones Valsa Koshy Alison Millett Claire Mooney Laurie Rousham Malcolm Swan Ian Thompson Helen J Williams Perspectives on the Teaching of Geometry for the 21st Century C. Mammana,V. Villani,2012-12-06 In recent years geometry seems to have lost large parts of its former central position in mathematics teaching in most countries However new trends have begun to counteract this tendency There is an increasing awareness that geometry plays a key role in mathematics and learning mathematics Although geometry has been eclipsed in the mathematics curriculum research in geometry has blossomed as new ideas have arisen from inside mathematics and other disciplines including computer science Due to reassessment of the role of geometry mathematics educators and mathematicians face new challenges In the present ICMI study the whole spectrum of teaching and learning of geometry is analysed Experts from all over the world took part in this study which was conducted on the basis of recent international research case studies and reports on actual school practice This book will be of particular interest to mathematics educators and mathematicians who are involved in the teaching of geometry at all educational levels as well as to researchers in mathematics education Designing Learning Environments for Developing Understanding of Geometry and Space Richard Lehrer,Daniel Chazan,2012-11-12 This volume reflects an appreciation of the interactive roles of subject matter teacher student and technologies in designing classrooms that promote understanding of geometry and space Although these elements of geometry education are mutually constituted the book is organized to highlight first the editors vision of a general geometry education second the development of student thinking in everyday and classroom contexts and third the role of technologies Rather than looking to high school geometry as the locus and all too often the apex of geometric reasoning the contributors to this volume suggest that reasoning about space can and should be successfully integrated with other forms of mathematics starting at the elementary level and continuing through high school Reintegrating spatial reasoning into the mathematical mainstream indeed placing it at the core of K 12 mathematics environments that promote learning with understanding will mean increased attention to problems in modeling structure and design and reinvigoration of traditional topics such as measure dimension and form Further the editors position is that the teaching of geometry and spatial visualization in school should not be compressed into a characterization of Greek geometry but should include attention to contributions to the mathematics of space that developed subsequent to those of the Greeks This volume is essential reading for those involved in mathematics education at all levels including university faculty researchers and graduate students Math Teacher's Survival Guide: Practical Strategies, Management Techniques, and Reproducibles for New and Experienced Teachers, Grades 5-12 Judith A.
