Teaching Evolution A Heuristic Study Of Personal And Cultural Dissonance:

Teaching Evolution Larry G. Grimes, 2012 **COVID Ecology and Evolution: Systemic Biosocial Dynamics** Matteo Convertino, Salvatore Flavio Pileggi, 2023-05-23 With the world in a state of emergency due to the Coronavirus pandemic almost the entire scientific community and all governmental intergovernmental agencies are focused on defining the most effective disease control and forecasting. However, is disease control the only or most crucial element to consider? In this Research Topic we intend to highlight crucially important topics about Coronavirus related to its environmental dependencies, biological diversity and stability, and socio-economic outcomes, considering also information modeling and technological aspects of the pandemic. The objective of the Research Topic is to bring together spatio-temporal biological, ecological, environmental, and social aspects of Coronavirus to better understand its dynamics, shifts, systemic impacts on health, and socio-economic effects. Studies via models that link Coronavirus to other viruses are welcome in order to properly characterize the biology, ecology, and environmental niche or universality of Coronavirus dynamics. We also seek prospective studies that investigate potential future spillovers of Coronavirus-like viruses by indicating risk hotspots in relation to socio-environmental determinants. Other issues focused on public health and medical aspects are welcome; however, these studies need to explicitly address the virus connection with the environment in order to gain insight into its ecology and evolution. Studies addressing data and modeling challenges as well as different model approaches from machine learning to phenomenological and process-based models have a lot of interest. Lastly, we highly encourage studies that quantitatively explore the coupled evolution of population perceptions and the associated infodemic, for instance, inferred from social media behavior and systemic health outcomes.

The MIT Encyclopedia of the Cognitive Sciences (MITECS) Robert A. Wilson, Frank C. Keil, 2001-09-04 Since the 1970s the cognitive sciences have offered multidisciplinary ways of understanding the mind and cognition. The MIT Encyclopedia of the Cognitive Sciences (MITECS) is a landmark comprehensive reference work that represents the methodological and theoretical diversity of this changing field. At the core of the encyclopedia are 471 concise entries from Acquisition and Adaptationism to Wundt and X-bar Theory. Each article, written by a leading researcher in the field, provides an accessible introduction to an important concept in the cognitive sciences as well as references or further readings. Six extended essays, which collectively serve as a roadmap to the articles, provide overviews of each of six major areas of cognitive science: Philosophy, Psychology, Neurosciences, Computational Intelligence, Linguistics, and Language and Culture, Cognition and Evolution. For both students and researchers, MITECS will be an indispensable guide to the current state of the cognitive sciences.

The Human Factor Philip Hefner, 1993 This amazing book takes into account all of the leading premises of the modern concept of biocultural evolution and builds a bridge to religious theory. Its value lies in its ability to pose the major questions and sketch proposals for dealing with them. To my knowledge, it is the first work to make such an attempt. Solomon H. Katz, University of Pennsylvania. Hefner's book is a major breakthrough in doing

constructive theology His view of human beings as created co creators is filled with balanced insight regarding how humans are united with the rest of creation while having a special place because of their brains and culture Karl E Peters Coeditor Zygon Journal of Religion and Science

Ecological Rationality Peter M. Todd, Gerd Gigerenzer, 2012-04-10 More information is always better and full information is best More computation is always better and optimization is best More is better ideals such as these have long shaped our vision of rationality Yet humans and other animals typically rely on simple heuristics to solve adaptive problems focusing on one or a few important cues and ignoring the rest and shortcutting computation rather than striving for as much as possible In this book we argue that in an uncertain world more information and computation are not always better and we ask when and why less can be more The answers to these questions constitute the idea of ecological rationality how we are able to achieve intelligence in the world by using simple heuristics matched to the environments we face exploiting the structures inherent in our physical biological social and cultural surroundings

Highlights in psychology: Cognitive bias Sergio Da Silva, Rashmi Gupta, Dario Monzani, 2023-07-24 *Social Psychology* Douglas/ Breuner Kenrick, Kenrick and Breuner Staff, Douglas T. Kenrick, Steven L. Neuberg, 1999-07 **Ethical Artificial Intelligence from Popular to Cognitive Science** Jordan Richard Schoenherr, 2022-06-24 This book offers a unique interdisciplinary perspective on the ethics of artificial intelligence, autonomous intelligent and connected systems or AIs, applying principles of social cognition to understand the social and ethical issues associated with the creation, adoption and implementation of AIs. As humans become entangled in sociotechnical systems defined by human and artificial agents, there is a pressing need to understand how trust is created, used and abused. Compounding the difficulty in answering these questions, stakeholders directly or indirectly affected by these systems differ in their motivations, understanding and values. This volume provides a comprehensive resource to help stakeholders understand ethical issues of designing and implementing AIs using an ethical sensemaking approach. Starting with the general technical affordances of AI, Dr Jordan Richard Schoenherr considers the features of system design relating data integrity, selection and interpretation of algorithms.

and the evolution processes that drive AISs innovation as a sociotechnological system The poles of technophobia algorithmic aversion and technophilia algorithmic preference in the public perception of AISs are then described and considered against existing evidence including issues ranging from the displacement and re education needs of the human workforce the impact of use of technology on interpersonal accord and surveillance and cybersecurity Ethical frameworks that provide tools for evaluating the values and outcomes of AISs are then reviewed and how they can be aligned with ethical sensemaking processes identified by psychological science is explored Finally these disparate threads are brought together in a design framework Also including sections on policies and guideline gaming and social media and Eastern philosophical frameworks this is fascinating reading for students and academics in psychology computer science philosophy and related areas as well as professionals such as policy makers and those working with AI systems
