Creation of Value, Art Or Science ? Jad Saade, 2001 The equity markets are an integral part of any dynamic economy They provide

liquidity for a nation and facilitate the creation of wealth Since the oldest stock markets opened in Europe and then subsequently in North America investors have been trying to harness their powers to achieve higher gains Many charlatans have come and gone professing to know the secrets of how to correctly predict the markets In reality there are only two types of stock market analyses Fundamental analysis and technical analysis The latter is the subject of this paper This paper will deal with the most important elements of technical analysis by showing practical applications of each and how the investor can use them in his own trading system It shows each type of investor what information is best to trade riskiest to trade safest to trade profitable expensive among other benefits This paper proposes a model of stock analysis that can be used to determine when to purchase a stock The model is based on charts and thus is purely a technical tool It succeeds in identifying stocks that are poised to go up in the near future Moreover this model is an original work in the field of technical stock market analysis Technical analysis is a unique form of stock market study It is purely a nonacademic field used only to make a profit in stocks In other words empirically or mathematically technical analysis has no foundations It cannot be proved or disproved using conventional academic techniques Moreover it will become evident from this paper that technical analysis is no more than an exercise in trial and error

Investing with the Trend Gregory L. Morris, 2013-12-31 Investing with the Trend provides an abundance of evidence for adopting a rules based approach to investing by offering something most avoid and that is to answer the why one would do it this way It explains the need to try to participate in the good markets and avoid the bad markets with cash being considered an asset class The book is in three primary sections and tries to leave no stone unturned in offering almost 40 years of experience in the markets Part I The focus is on much of the misinformation in modern finance the inappropriate use of Gaussian statistics the faulty assumptions with Modern Portfolio Theory and a host of other examples The author attempts to explain each and offer justification for his often strong opinions Part II After a lead chapter on the merits of technical analysis the author offers detailed research into trend analysis showing how to identify if a market is trending or not and how to measure it Further research involves the concept of Drawdown which the author adamantly states is a better measure of investor risk than the oft used and terribly wrong use of volatility as determined by standard deviation Part III This is where he puts it all together and shows the reader all of the steps and details on how to create a rules based trend following investment strategy A solid disciplined strategy consists of three parts a measure of what the market is actually doing a set of rules and guidelines to tell you how to invest based upon that measurement and the discipline to follow the strategy
