The Boost C Libraries:

The Boost C++ Libraries Boris Schäling, The second edition of The Boost C Libraries introduces 72 Boost libraries that provide a wide range of useful capabilities They help you manage memory and process strings more easily They provide containers and other data structures that go well beyond what the standard library offers They make it easy to build platform independent network applications Simply put these 72 libraries greatly expand your C toolbox The second edition contains more than 430 examples All examples are as short as possible but they are complete so you can compile and run them as is They show you what the Boost libraries offer and give you a head start on using the libraries in your own applications The goal of this book is to increase your efficiency as a C developer and to simplify software development with C The Boost libraries introduced in this book will help you write less code with fewer bugs and finish projects faster You code will be more concise and self explanatory and more easily adapted when requirements change The second edition is based on the Boost libraries 1 55 0 and 1 56 0 with the latter version having been released in August 2014 The examples are based on C 11 and have been tested with Visual Studio 2013 GCC 4 8 and Clang 3 3 on various platforms For Boost libraries which were incorporated into the C 11 standard library differences between Boost and the standard library are highlighted The Boost libraries are one of the most important and influential open source C libraries Their source code is available under a permissive free software license Several Boost libraries have been incorporated into the C 11 standard library The Boost libraries are developed and supported by the Boost community a worldwide developer community with a strong interest in pushing C boundaries further

Data Clustering in C++ Guojun Gan, 2011-03-28 Data clustering is a highly interdisciplinary field the goal of which is to divide a set of objects into homogeneous groups such that objects in the same group are similar and objects in different groups are quite distinct Thousands of theoretical papers and a number of books on data clustering have been published over the past 50 years However few books exist to teach people how to implement data clustering algorithms This book was written for anyone who wants to implement or improve their data clustering algorithms Using object oriented design and programming techniques Data Clustering in C exploits the commonalities of all data clustering algorithms to create a flexible set of reusable classes that simplifies the implementation of any data clustering

algorithm Readers can follow the development of the base data clustering classes and several popular data clustering algorithms Additional topics such as data pre processing data visualization cluster visualization and cluster interpretation are briefly covered This book is divided into three parts Data Clustering and C Preliminaries A review of basic concepts of data clustering the unified modeling language object oriented programming in C and design patterns A C Data Clustering Framework The development of data clustering base classes Data Clustering Algorithms The implementation of several popular data clustering algorithms A key to learning a clustering algorithm is to implement and experiment the clustering algorithm Complete listings of classes examples unit test cases and GNU configuration files are included in the appendices of this book as well as in the downloadable resources The only requirements to compile the code are a modern C compiler and the Boost C libraries

Exploring C++ Ray Lischner,2009-02-07 Exploring C uses a series of self directed lessons to divide C into bite sized chunks that you can digest as rapidly as you can swallow them The book assumes only a basic understanding of fundamental programming concepts variables functions expressions statements and requires no prior knowledge of C or any other particular language It reduces the usually considerable complexity of C The included lessons allow you to learn by doing as a participant of an interactive education session You ll master each step in one sitting before you proceed to the next Author Ray Lischner has designed questions to promote learning new material And by responding to questions throughout the text you ll be engaged every step of the way

Robotic Sailing 2017 Kjell Ivar Øvergård,2018-02-23 Robotic Sailing 2017 This book contains the peer reviewed papers presented at the 10th International Robotic Sailing Conference which was organized in conjunction with the 10th World Robotic Sailing Championship held in Horten Norway the 4th 9th of September 2017 The seven papers cover topics of interest for autonomous robotic sailing which represents some of the most challenging research and development areas The book is divided into two parts The first part contains papers which focus on the design of sails and software for the assessment and predication of sailboat performance as well as software platforms and middleware for sailboat competition and research The second part includes algorithms and strategies for navigation and collision avoidance on local mid and long range The differences in approach in the included papers show that robotic sailing is still an emerging cross disciplinary science The multitude of suggestions to the specific problems of prediction and simulation of sailboats as well as the challenges of route planning anti grounding and collision avoidance are good indicators of science in its infancy Hence we may expect the future to hold great advances for robotic sailing
