Academic Scientists at Work Jeremy Boss, Susan Eckert, 2006-10-16 A guide for scientists on the journey from the end of a postdoctoral career to the point of promotion to Associate Professor this 2nd edition focuses on three aspects of the academic setting: Scholarship, Teaching, and Service. Valuable advice is provided on such topics as choosing and landing an academic job, setting up and managing the lab, obtaining funds, organizing writing and publishing your work, teaching and mentoring, and the promotion and tenure process.

Experiments in International Benchmarking of US Research Fields Institute of Medicine, National Academy of Engineering, National Academy of Sciences, Committee on Science, Engineering, and Public Policy, 2000-03-28 How can the federal government gauge the overall health of scientific research as a whole and in its parts and determine whether national funding adequately supports national research objectives? It is feasible to monitor US performance with field-by-field peer assessments. This might be done through the establishment of independent panels consisting of researchers who work in a field, individuals who work in closely related fields, and research users who follow the field closely. Some of these individuals should be outstanding foreign scientists in the field being examined. This technique of comparative international assessments is also known as international benchmarking. **Experiments in International Benchmarking of US Research Fields** evaluates the feasibility and utility of the benchmarking technique. In order to do this, the report internationally benchmarks three fields: mathematics, immunology, and materials science and engineering, then summarizes the results of these experiments.

Recent advances and challenges in cancer immunotherapies for patients with autoimmune diseases Reem Saleh, Murugaiyan Gopal, Omer Gilan, Simon Keam, 2023-02-09 **Engineered immune cells in cancer immunotherapy (EICCI)** Cristina Maccalli, Axel Schambach, Francisco Martin, Cameron Turtle, 2023-02-28 **Deciphering the Regulatory Role of Transcription Factors in Cancer Immune Infiltration** Qian Yang, Yujia Lan, Jin-Fen Xiao, 2025-02-18

Transcription factors (TFs) are proteins that bind to specific DNA sequences and regulate the transcription of target genes. They control various cellular processes including cell proliferation, differentiation, and immune responses. In cancer, dysregulated TF activity can profoundly impact the tumor microenvironment, influencing immune cell recruitment, activation, and function. By modulating the expression of immune-related genes, TFs can either promote or suppress immune infiltration in the tumor, shaping the anti-tumor immune response. Cancer immune infiltration, the process by which immune cells infiltrate tumor tissues, is a critical aspect of the tumor microenvironment and plays a pivotal role in cancer progression and response to therapy. Understanding the regulatory role of TFs in cancer immune infiltration holds significant promise for the development of novel therapeutic strategies and biomarkers for cancer treatment.

Interdependencies and Interfaces in Bone Regeneration - The Immune System at its Core Katharina Schmidt-Bleek, Bettina Willie, Thaqif El Khassawna, Kurt David Hankenson, 2024-03-19 **COVID-19: Integrating Artificial Intelligence, Data Science, Mathematics, Medicine and Public Health, Epidemiology, Neuroscience, Neurorobotics, and Biomedical Science in Pandemic Management, volume II** Atefeh Abedini, Reza Lashgari, 2024-02-29 *New insights of immune cells in cardiovascular and metabolic disorders* Yingmei Feng, Xiangwei Xiao, Catherine M. Verfaillie, 2023-10-26 *The Molecular Basis of Programmed Cell Death and Neuroinflammation in Neurodegenerative Diseases* Ramkumar Mathur, Chetna Soni, Antariksh Tyagi, Xusheng Wang, 2024-01-25 Age related neurodegenerative diseases such as Alzheimer's disease and Parkinson's disease are characterized by progressive neuroinflammation as well as neuronal degeneration Apoptosis, necrosis and autophagy are all types of programmed cell death that are morphologically distinct from one another Over the last decade extensive research has been conducted on necroptosis resulting in a better understanding of its molecular underpinnings and role in neurodegenerative diseases A later study investigates the processes of apoptosis and necroptosis as well as their roles in the activation of inflammatory immune responses Although there is a distinct mode of cell death with distinct morphological characteristics its identification and implications in neurological diseases are still unknown Interestingly emerging evidence has established a direct link between epigenetic and posttranslational modifications and neurodegenerative disease Using epigenetic and proteomic methods researchers uncovered genes and proteins that may play a function in the area of neuroinflammation a role that has hitherto been overlooked New pharmacological targets and therapeutic options for neurodegenerative diseases are being investigated in order to gain a better understanding of the disease's origins and progression by using neuronal death and neuroinflammation models that are associated with epigenetic changes *Viral Impact on CNS: Mechanisms of Immune Dysfunction and Cognitive Decline, 2nd edition* Thomas A. Angelovich, Sonia Mediouni, Bruce James Brew, Melissa Jayne Churchill, Jacob D. Estes, Robyn Klein, 2025-09-25 Viral infections pose significant threats to human health with many viruses capable of infiltrating the central nervous system (CNS) and causing severe consequences such as immune activation, encephalitis and cognitive impairment Notable viruses like HIV, EBV, HCV, JC virus, CMV and the recent SARS-CoV-2 have been linked to neurodegeneration and cognitive decline These viruses can impact the CNS through direct infection of CNS cells such as microglia, astrocytes, oligodendrocytes and neurons leading to altered cell homeostasis, blood-brain barrier damage and leukocyte recruitment Additionally systemic inflammation from viral infections outside the CNS can exacerbate or independently cause immune dysfunction in the brain Despite these insights the specific mechanisms and effects of many pathogens on the brain remain unclear This research topic seeks to consolidate current evidence on how viruses affect CNS homeostasis and cell function contributing to pathological outcomes It aims to identify potential similarities and differences in the mechanisms and effects of various viruses on the CNS with a focus on the long-term impact on resident brain cells This

research topic aims to elucidate the immunological consequences of viral infections on brain homeostasis and cognitive function By examining the effects of different viruses on the CNS the research seeks to uncover the mechanisms driving immune dysfunction and cognitive impairment The ultimate goal is to inform strategies for targeting and eradicating viruses from the CNS thereby improving brain health for millions affected by viral infections annually To gather further insights into the immunological consequences of viral infections on brain homeostasis and cognitive impairment we welcome articles addressing but not limited to the following themes Studies assessing the effects of viruses including but not limited to HIV SARS CoV 2 Epstein Barr Virus and Zika virus on the central nervous system Basic mechanistic studies in vitro in vivo ex vivo exploring the effects of viral infection exposure or immune activation on CNS cell homeostasis and function Investigations into viral persistence in the CNS including mechanisms and consequences Clinical trials and case reports examining the effects of viral infection on immune activation in the brain

Neutrophil Death Regulation in Critical Illness Jia-feng Wang, John Marshall, Bingwei Sun, 2023-04-14

Endocrinology of Obesity, Aging and Stress Yuko Maejima, Kenju Shimomura, Heidi de Wet, 2025-04-09 The prevalence of obesity is increasing on a global scale In addition we are facing the arrival of super aging society Obesity s effects on cognitive decline mobility hypertension and stress are similar to symptoms seen in aging Both obesity and aging lead to serious health problems and increase the risk of developing multiple diseases and even death Aging is associated with an increase in abdominal fat a major contributor to insulin resistance and metabolic syndrome Obesity and aging share a similar spectrum of phenotypes such as compromised genomic integrity impaired mitochondrial function accumulation of intracellular macromolecules weakened immunity shifts in tissue and body composition and enhanced systemic inflammation Overall the current search results suggest that there is a complex relationship between obesity aging and stress Both obesity and aging are associated with inflammation and oxidative stress which are also associated with stress In order to understand the cross talk among obesity aging and stress from an endocrinological point of view we propose the topic entitled Endocrinology of obesity aging and stress

Assessment and Management of Adverse Drug Reactions in Oncology Kevin Sheng-Kai Ma, Chun-Bing Chen, 2023-08-02 **Interaction between the Gut Flora and Immunity in Intestinal Diseases** Yating Li, Silvia Turroni, Lan Gong, Ding Shi, 2024-08-20 The composition of gut microbiota plays a critical role in maintaining the host s health particularly in regulating immune homeostasis and the intestinal immune response A massive effort has pointed to the importance of these interactions in various intestinal diseases like colorectal cancer CRC irritable bowel syndrome IBS and inflammatory bowel disease IBD Microbiome influences the formation of key components of both the innate and adaptive immune systems while the immune system is responsible for regulating and maintaining the symbiotic relationship between the host and microbes Currently the crosstalk between gut flora and host immunity is not fully revealed in both homeostasis maintenance and disease development Hence detailed mechanistic studies are needed to further explore the microbial manipulation on host immunity

as well as the immune response to microbiome dysbiosis in intestinal diseases Current evidence indicates a strong bidirectional interaction between microbiome perturbation and immune dysregulation The aim of this Research Topic is to create a platform for the advancement of research on the causal relationship between the microbiome and immunity Besides we would like to define the core microbiota responsible for the initiation and progression of intestinal diseases the molecular mechanisms of host immune microbiome interactions and novel gut targeted pharmacological interventions to achieve a positive impact on intestinal disease

The Gut-Skin Axis: Interaction of Gut Microbiome and Skin Diseases Jianmin Chai,Xiaoyuan Wei ,Jiangchao Zhao,2024-06-13 More and more evidence has demonstrated that gut microbiome plays critical roles in modulating the development of diseases beyond the gastrointestinal tract including skin disorders such as psoriasis The new conception gut skin axis refers to the bidirectional relationship between the gut microbiome and skin health Several mechanisms such as intestinal barrier inflammatory mediators and metabolites have been proposed for gut skin axis Currently there have been various studies regarding the presence of the gut skin axis and its resulting inflammatory effect due to gut microbiome imbalance In addition dysbiosis of the skin and gut microbiota is also observed in skin disorders Therefore understanding the gut skin axis especially in terms of microbiome modulation is important for the gut and skin health which may lead to development of novel therapies for skin disease

Innate immune dysregulation: a driving force of autoimmunity and chronic inflammation Jens Y. Humrich,Tamas Nemeth,Kyle T. Amber,Reza Akbarzadeh,2025-07-29 Innate immunity is essential in host protection against infections tumors and tissue injury that generates inflammatory responses and mediates the recruitment of immune cells as well as the production of pro and anti inflammatory mediators during the initiation of an immune response However compelling evidence indicates that innate immunity applies mechanisms beyond a simple first line defense against pathogens as it faces a diverse range of invading pathogens provides complex crosstalk with adaptive immunity and its aberrant regulation is associated with diverse pathologies Initiation activation and resolution of the innate inflammatory reactions should be tightly regulated to provide effective elimination of pathogens and maintenance of tissue homeostasis but also avoid overreacting inflammatory responses Dysregulated innate immune reactions typically cause autoinflammatory diseases but also contribute to chronic inflammation and autoimmune diseases such as systemic lupus erythematosus rheumatoid arthritis multiple sclerosis or inflammatory bowel disease Although autoimmunity is defined by a loss of self tolerance typically caused by dysregulation of the adaptive immune system innate immunity exerts a key role in the initiation progression and perpetuation of chronic inflammation and autoimmunity
