web seeded region growing abstract we present here a new algorithm for segmentation of intensity images which is robust

rapid and free of tuning parameters the method however requires the input of a number of seeds either individual pixels or regions which will control the formation of regions into which the image will be segmented

web jul 21 2015 1 answer sorted by 0 in order to answer your question you should add the following condition  $i \leq x_n$   $y_n \leq 255$   $i \leq x_n$   $y_n \leq 1$   $i$  is the image  $x_n$   $y_n$  are neighbour coordinate being processed so when the algorithm wants to process a neighbour it should take in consideration the condition first

web feb 11 2021 1 answer region growing is a very simple algorithm in short it says if the next pixels is less than `reg_maxdist` in pixel value than the current pixel its part of the region otherwise its not your image is very smooth that means that pixel values change slowly in adjacent pixels thus region growing algorithms will take them in
