

Anatomy & Physiology Syllabus

About the Class: Anatomy and physiology will investigate the structures and functions of the human body. We will study these through classroom discussions, textbook and internet use, projects, and laboratory activities. We will also explore possible careers in the health sciences and visit the University of South Dakota for Scrub's Camp. Your grade will be based on daily work, labs, quizzes, and tests.

Areas of Study:

- Chapter 1 – Body Orientation
- Chapter 2 – Basic Chemistry
- Chapter 3 – Cells & Tissues
- Chapter 4 – Skin & Body Membranes
- Chapter 5 – Skeletal System
- Chapter 6 – Muscular System
- Chapter 7 – Nervous System
- Chapter 8 – Special Senses

- Chapter 9 – Endocrine System
- Chapter 10 – Blood
- Chapter 11 – Cardiovascular System
- Chapter 12 – Body Defenses
- Chapter 13 – Respiratory System
- Chapter 14 – Digestive System & Metabolism
- Chapter 15 – Urinary System
- Chapter 16 – Reproductive System

About Me: This will be my **second** year at Dakota Valley and my second year teaching Anatomy and Physiology. I am very excited about this class and will continue to make it the best I possibly can! I grew up in Battle Creek, IA and earned my Bachelor's degree in Biology and Secondary Education from Briar Cliff University. I enjoy spending time with my fiancé and my nieces and nephew.

Tips for Success: Anatomy and Physiology is a course that requires memorization of body parts and functions. Therefore, students must be willing to put forth time and effort on a regular basis in order to be successful. Classroom activities and resources will be geared to help facilitate this type of learning. Taking a few minutes during SRB and each evening to practice and quiz yourself will really help.

Classroom Expectations: Please bring the following with you to class each day: your laptop, textbook, notebook, folder, pencil, and pen. Assignments turned in after the due date will receive, at most, half credit. In addition to the daily routine, students will be expected to read and verbally report on a current health science topic once each quarter.

3rd International Conference on Nanotechnologies and Biomedical Engineering Victor Sontea, Ion

Tiginyanu, 2015-09-23 This volume presents the proceedings of the 3rd International Conference on Nanotechnologies and Biomedical Engineering which was held on September 23-26, 2015 in Chisinau Republic of Moldova. ICNBME 2015 continues the series of International Conferences in the field of nanotechnologies and biomedical engineering. It aims at bringing together scientists and engineers dealing with fundamental and applied research for reporting on the latest theoretical developments and applications involved in the fields. Topics include Nanotechnologies and nanomaterials, Plasmonics and metamaterials, Bio micro nano technologies, Biomaterials, Biosensors and sensors systems, Biomedical instrumentation, Biomedical signal processing, Biomedical imaging and image processing, Molecular, cellular and tissue engineering, Clinical engineering, health technology management and assessment, Health informatics, e health and telemedicine, Biomedical engineering education, Nuclear and radiation safety and security, Innovations and technology transfer. Physiology and the Biomedical Engineering Curriculum, 2013. A mixed methods research study was designed to test whether undergraduate engineering students were better prepared to learn advanced topics in biomedical engineering if they learned physiology via a quantitative concept based approach rather than a qualitative system based approach. Experiments were conducted with undergraduate engineering student participants and the resultant quantitative and qualitative data were evaluated. This dissertation presents three contributions that have been made to the field of biomedical engineering education: a curriculum contribution, an applied pedagogical contribution, and a theory testing contribution. The curriculum contribution focuses on the physiology sub curriculum of undergraduate biomedical engineering programs and describes a process by which physiology courses structured around organ systems can be converted to courses that focus on core physiology concepts. An applied pedagogical or teaching contribution is made through the observation of interaction in spaces used for collaborative problem solving in an online undergraduate learning environment. An online discussion forum, avatar based chat in a multi user virtual environment, and a wiki are evaluated in this study. Finally, the theory testing contribution utilizes qualitative research methods to analyze data from the learning records of study participants for evidence of adaptive expertise. A multiple case study comparison of participants with low, mid, and high scores on the Index of Adaptive Expertise is reported.

Case studies and pedagogical strategies to help science and engineering students improve their writing and speaking skills while developing professional identities. To many science and engineering students, the task of writing may seem irrelevant to their future professional careers. At MIT, however, students

discover that writing about their technical work is important not only in solving real world problems but also in developing their professional identities MIT puts into practice the belief that engineers who don't write well end up working for engineers who do write well requiring all students to take communications intensive classes in which they learn from MIT faculty and writing instructors how to express their ideas in writing and in presentations Students are challenged not only to think like professional scientists and engineers but also to communicate like them This book offers in depth case studies and pedagogical strategies from a range of science and engineering communication intensive classes at MIT It traces the progress of seventeen students from diverse backgrounds in seven classes that span five departments Undergraduates in biology attempt to turn scientific findings into a research article graduate students learn to define their research for scientific grant writing undergraduates in biomedical engineering learn to use data as evidence and students in aeronautic and astronautic engineering learn to communicate collaboratively Each case study is introduced by a description of its theoretical and curricular context and an outline of the objectives for the students activities The studies describe the on the ground realities of working with faculty staff and students to achieve communication and course goals offering lessons that can be easily applied to a wide variety of settings and institutions

Metabolic Engineering George Stephanopoulos, Aristos A. Aristidou, Jens Nielsen, 1998-10-17 Metabolic engineering is a new field with applications in the production of chemicals fuels materials pharmaceuticals and medicine at the genetic level The field's novelty is in the synthesis of molecular biology techniques and the tools of mathematical analysis which allow rational selection of targets for genetic modification through measurements and control of metabolic fluxes The objective is to identify specific genetics or environmental manipulations that result in improvements in yield and productivities of biotechnological processes Key features of the book are pathway integration and the focus on metabolic flux as a fundamental determinant of cell physiology The book keeps mathematical complexity to a minimum and provides a glossary of biological terms to facilitate use of the book by a broader spectrum of readers A web page exists to communicate updates of the codes and homework problems Demonstrates metabolic engineering in action with numerous examples of pathway modification Includes methods for identifying key enzymes in metabolic networks Contains a comprehensive review of metabolic biochemistry Discusses metabolic regulation at the gene enzyme operon and cell levels Explains concepts of stoichiometry kinetics and thermodynamics of metabolic pathways Minimizes mathematical complexity Links to a Web page to communicate updates of the software code and homework problems
