Risk and Crisis Communications Pamela (Ferrante) Walaski, 2011-07-07 The go-to guide for learning what to say and how to say it. In this climate of near-constant streams of media messages, organizations need to know how to effectively communicate risks to their audiences and what to say when a crisis strikes. *Risk and Crisis Communications: Methods and Messages* is designed to help organizations understand the essential components of communicating about risks during a crisis and it carves out a role for safety, health, and environmental (SHE) professionals in the process. Covering common theoretical concepts and explaining the positions of noted experts in the field, such as Peter Sandman and Vincent Covello, the book provides a fundamental understanding of the process behind crafting effective messages for a variety of different situations and explains the consequences of saying the wrong thing to an emotional audience. Incorporating numerous case studies, including the BP Deepwater Horizon Oil Spill and the 2010 H1N1 pandemic, it shows how messages can change the way an audience perceives an event and how they react to it, clearly demonstrating how ineffective messages can create untold difficulties for an organization's public image. Savvy SHE professionals know that their role in helping to craft risk and crisis messages, as well as assisting in the execution of risk communication plans, provides a critical path to becoming more valuable members of their organizations. *Risk and Crisis Communications: Methods and Messages* provides invaluable assistance in helping SHE professionals add value to their organization.

Swine Influenza Jürgen A. Richt, Richard J. Webby, 2014-07-08. From the first detailed clinical description of the disease in the Midwestern United States in 1918 to the isolation of the causative agent, the first of any influenza virus in 1930 to its role in the genesis of the 2009 human pandemic, swine have played a central role in the ecology of influenza. Although not considered the major natural reservoir for influenza A viruses, swine are host to a limited but dynamic assortment of viruses. A number of subtypes of influenza A viruses of human and avian origin including H1, H2, H3, H4, H5, H7 and H9 have been isolated from global swine populations. Most of these isolations have however been limited in number and it is only H1 and H3 influenza viruses that are known to have formed stable lineages in swine. In this respect, swine influenza viruses (SIV) are similar to their counterparts in humans where H1 and H3 viruses have also been maintained. The nature of these H1 and H3 viruses differ between the two host populations, however, and as discussed throughout this book, are even different in swine populations in different geographic regions of the world due to multiple introductions of avian and human influenza viruses.
