The Life of a Virus Angela N. H. Creager, 2002 We normally think of viruses in terms of the devastating diseases they cause from smallpox to AIDS But in *The Life of a Virus* Angela N H Creager introduces us to a plant virus that has taught us much of what we know about all viruses including the lethal ones and that also played a crucial role in the development of molecular biology Focusing on the tobacco mosaic virus TMV research conducted in Nobel laureate Wendell Stanley's lab Creager argues that TMV served as a model system for virology and molecular biology much as the fruit fly and laboratory mouse have for genetics and cancer research She examines how the experimental techniques and instruments Stanley and his colleagues developed for studying TMV were generalized not just to other labs working on TMV but also to research on other diseases such as poliomyelitis and influenza and to studies of genes and cell organelles The great success of research on TMV also helped justify increased spending on biomedical research in the postwar years partly through the National Foundation for Infantile Paralysis's March of Dimes a funding priority that has continued to this day *Peterson's Annual Guides to Graduate Study*, 1983 *Innovative Design, Analysis and Development Practices in Aerospace and Automotive Engineering (I-DAD 2018)* U.
