Handbook of Measurement in Science and Engineering, Volume 1
Myer Kutz, 2015-12-04 A multidisciplinary reference of engineering measurement tools techniques and applications Volume 1

When you can measure what you are speaking about and express it in numbers you know something about it but when you cannot measure it when you cannot express it in numbers your knowledge is of a meager and unsatisfactory kind it may be the beginning of knowledge but you have scarcely in your thoughts advanced to the stage of science Lord Kelvin

Measurement falls at the heart of any engineering discipline and job function Whether engineers are attempting to state requirements quantitatively and demonstrate compliance to track progress and predict results or to analyze costs and benefits they must use the right tools and techniques to produce meaningful useful data The Handbook of Measurement in Science and Engineering is the most comprehensive up to date reference set on engineering measurements beyond anything on the market today Encyclopedic in scope Volume 1 spans several disciplines Civil and Environmental Engineering Mechanical and Biomedical Engineering and Industrial Engineering and covers New Measurement Techniques in Structural Health Monitoring Traffic Congestion Management Measurements in Environmental Engineering Dimensions Surfaces and Their Measurement Luminescent Method for Pressure Measurement Vibration Measurement Temperature Measurement Force Measurement Heat Transfer Measurements for Non Boiling Two Phase Flow Solar Energy Measurements Human Movement Measurements Physiological Flow Measurements GIS and Computer Mapping Seismic Testing of Highway Bridges Hydrology Measurements Mobile Source Emissions Testing Mass Properties Measurement Resistive Strain Measurement Devices Acoustics Measurements Pressure and Velocity Measurements Heat Flux Measurement Wind Energy Measurements Flow Measurement Statistical Quality Control Industrial Energy Efficiency Industrial Waste Auditing Vital for engineers scientists and technical managers in industry and government Handbook of Measurement in Science and Engineering will also prove ideal for members of major engineering associations and academics and researchers at universities and laboratories

Mobility Modeling for Vehicular Communication Networks Khadige Abboud, Weihua Zhuang, 2016-02-19 This brief presents a stochastic microscopic mobility model that describes the temporal changes of intervehicle distances The model is consistent with simulated and empirical vehicle traffic patterns Using stochastic lumpability methods the proposed mobility model is mapped into an aggregated mobility model that describes the mobility of a group of vehicles In addition the proposed mobility model is used to analyze the spatiotemporal VANET topology Two metrics are proposed to characterize the impact of vehicle mobility on VANET topology the time period between successive changes in communication link state connection and disconnection and the time period between successive changes in node s one hop neighborhood Using the proposed lumped group mobility model the two VANET topology metrics are probabilistically characterized for different vehicular traffic flow conditions Furthermore the limiting behavior of a system of two hop vehicles and the overlap state of their coverage ranges is modeled and the steady state number of common vehicle neighbors between the two vehicles is approximately derived The proposed mobility model will facilitate mathematical analysis in VANETs The spatiotemporal VANET topology analysis provides a useful tool for the development of mobility aware vehicular network protocols Mobility Modeling for Vehicular Communication Networks is designed for researchers developers and professionals involved with vehicular communications It is also suitable for advanced level students interested in communications transport infrastructure and infotainment applications

Time Division Multiple Access For Vehicular Communications Hassan Aboubakr Omar, Weihua Zhuang, 2014-09-02 This brief focuses on medium access control MAC in vehicular ad hoc networks VANETs and presents VeMAC a novel MAC scheme based on distributed time division multiple access TDMA for VANETs The performance of VeMAC is evaluated via mathematical analysis and computer simulations in comparison with other existing MAC protocols including the IEEE 802 11p standard This brief aims at proposing TDMA as a suitable MAC scheme for VANETs which can support the quality of service requirements of high priority VANET applications

Advanced Mobility and Transport Engineering Slim Hammadi, Mekki Ksouri, 2013-03-04 Multimodal transport network customers need to be directed during their travels A travel support tool can be offered by a Multimodal Information System MIS which allows them to input their needs and provides them with the appropriate responses to improve their travel conditions The goal of this book is to design and develop methodologies in order to realize a MIS tool which can ensure permanent multimodal information availability before and during travel considering passengers mobility The authors propose methods and tools that help transport network customers

to formulate their requests when they connect to their favorite information systems through PC laptop cell phone Portable Digital Assistant PDA etc The MIS must automatically identify the websites concerning the customer s services These sites can in fact represent transport services cultural services tourist services etc The system should then be able to collect the necessary travel information from these sites in order to construct and propose the most convenient information according to the user s requests
