Instrumentation for Ground-Based Optical Astronomy Lloyd B. Robinson,2012-12-06 Historically the discovery of tools or evidence that tools have been used has been taken as proof of human activity certainly the invention and spread of new tools has been a critical marker of human progress and has increased our ability to observe measure and understand the physical world In astronomy the tools are telescopes and the optical and electronic instruments that support them The use of the telescope by Galileo marked the beginning of a new and productive way to study and understand the universe in which we live The effects of this new tool on what we can see and how we see ourselves are well known However after almost four centuries of developing ever more sensitive and subtle instruments as tools for astronomy it might have been expected that only a few minor improvements would remain to be made or that possibly the law of diminishing returns would have taken effect On the contrary the new instruments and ideas for new instruments described in this book make it clear that the rate of progress has not diminished and that this subject is still as exciting and productive as ever Instrumentation for Ground Based Optical Astronomy was chosen as the theme for the Ninth Santa Cruz Summer Workshop in Astronomy and Astrophysics *Departments of Labor, Health and Human Services, Education, and related agencies appropriations for 1985* United States.
