

Vitruvian Man Meets the Scientific Method Writing and Testing Appropriate Hypotheses

Leonardo da Vinci's drawing, Vitruvian Man, shows how the proportions of the human body fit perfectly into a circle and a square. This diagram by Leonardo da Vinci is an illustration of "Vitruvian Theory." According to Vitruvian Theory, the dimensions that describe our knowledge (our words) should fit snugly in the square that is our reality. In this analogy, you will replace the language of "Vitruvian Theory" with developing appropriate hypothesis Vitruvian Man.

1. Hypotheses are generalizable representations that are all observations or events for scientific purposes. A hypothesis is generally a test statement. Formulated by prediction with generally scientific or theoretical status using the phrase statement. For example:

- (a) "If you use blue and red flower electrolysis is added, after about 2 minutes the color change will be visible, it will stop."
- (b) "If increasing physical activity causes a person to have elevated heart rate, then a subject heart rate will increase if they are fit."

Formulated hypothesis contains a dependent variable independent variable. The independent variable is the variable that changes under dependent variable under test (the effect and control or control data). Formulated a hypothesis that says "If the independent is observed then the dependent will also change accordingly." For example, hypothesis: "If the independent variable is observed then the dependent variable will change accordingly." If the independent variable is observed then the dependent variable will change accordingly. During the collection process the researcher is looking for the dependent variable change.

PURPOSE

Students will be able to identify and write hypotheses regarding the relationship between the independent variable and the dependent variable.
