Zou, Jingfeng Yuan, Qian Wang, Yi Peng, 2024-11-27 This book presents the proceedings of CRIOCM 2023 sharing the latest developments in real estate and construction management around the globe. The conference was organized by the Chinese Research Institute of Construction Management CRIOCM and Southeast University. Written by international academics and professionals, the proceedings discuss the latest achievements, research findings, and advances in frontier disciplines in the field of construction management and real estate, covering a wide range of topics including new theory and practice of engineering management, smart construction and maintenance, green low carbon building and sustainable development, big data and blockchain construction and real estate economy, real estate finance and investment, real estate management and housing policy, innovative theory and practice of urban governance, land use and urban planning, and other related issues. The discussions provide valuable insights into the implementation of advanced construction project management and real estate market in China and abroad. The book offers an outstanding resource for academics and professionals.

Construction 4.0 Marco Casini, 2021-11-24 Developments in data acquisition technologies, digital information and analysis, automated construction processes, and advanced materials and products have finally started to move the construction industry, traditionally reluctant to innovation and slow in adopting new technologies, toward a new era. Massive changes are occurring because of the possibilities created by Building Information Modeling, Extended Reality, Internet of Things, Artificial Intelligence, and Machine Learning. Big data, Nanotechnology, 3D printing, and other advanced technologies, which are strongly interconnected, are driving the capabilities for much more efficient construction at scale.

Construction 4.0: Advanced Technology Tools and Materials for the Digital Transformation of the Construction Industry provides readers with a state-of-the-art review of the ongoing digital transformation of the sector within the new 4.0 framework, presenting a thorough investigation of the emerging trends, technologies, and strategies in the fields of smart building, design, construction, and operation, and providing a comprehensive guideline on how to exploit the new possibilities offered by the digital revolution. It will be an essential reference resource for academic researchers, material scientists, and civil engineers, undergraduate and graduate students, and other professionals working in the field of smart, eco-efficient construction and cutting-edge technologies applied to construction. Provides an overview of the Construction 4.0 framework to address the global challenges of the building sector in the 21st century and an in-depth analysis of the most advanced digital technologies and systems for the operation and maintenance of infrastructure, real estate, and other built assets. Covers major innovations across the value chain, including building design, fabrication, construction, operation, and maintenance, and end-of-life. Illustrates the most advanced digital tools and methods to support the building design activity, including generative design, virtual reality, and digital fabrication. Presents a thorough review of the most advanced construction materials, building methods, and techniques for a new connected and automated construction model. Explores the digital transformation for smart energy buildings and their integration with emerging smart grids and smart cities. Reflects upon major findings and identifies
