Chem Worksheet 15-1

Name _____

Many ionic compounds will dissolve in water so we say they are **soluble**. Sodium chloride (NaCl), and potassium nitrate (KNO₃) are two examples of soluble compounds. When these compounds are mixed with water they dissolve, and we describe them as aqueous (aq). There are many ionic compounds that do not dissolve in water, though. These are described as **insoluble**. An insoluble substance simply remains in the solid state (s) when added to water. The chart below can be used to predict whether the compounds are soluble or insoluble.
