Towards Smart Production Management Systems* Farhad Ameri, Kathryn E. Steckel, Gregor von Cieminski, Dimitris Kiritsis, 2019-08-23 The two volume set IFIP AICT 566 and 567 constitutes the refereed proceedings of the International IFIP WG 5.7 Conference on Advances in Production Management Systems APMS 2019 held in Austin TX USA The 161 revised full papers presented were carefully reviewed and selected from 184 submissions They discuss globally pressing issues in smart manufacturing operations management supply chain management and Industry 4.0 The papers are organized in the following topical sections lean production production management in food supply chains sustainability and reconfigurability of manufacturing systems product and asset life cycle management in smart factories of industry 4.0 variety and complexity management in the era of industry 4.0 participatory methods for supporting the career choices in industrial engineering and management education blockchain in supply chain management designing and delivering smart services in the digital age operations management in engineer to order manufacturing the operator 4.0 and the Internet of Things services and people intelligent diagnostics and maintenance solutions for smart manufacturing smart supply networks production management theory and methodology data driven production management industry 4.0 implementations smart factory and IIOT cyber physical systems knowledge management in design and manufacturing collaborative product development ICT for collaborative manufacturing collaborative technology applications of machine learning in production management and collaborative technology *System-Ergonomic Design of Cognitive Automation* Reiner Onken, Axel Schulte, 2010-01-06 Why this book Simply because it is due Cognitive automation and its system ergonomic introduction into work systems have been advanced in the meantime to such a degree that already applications for operational work systems are slowly becoming reality This book shall contribute to give system designers some more guidelines about designing work systems and associated cognitive machines effectively in particular those related to guidance and control of manned and unmanned vehicles The issue is that the findings on cognition have to become sufficient commonsense for all from the various disciplines involved in system design and that guidelines are given how to make use of it in an appropriate and

systematic manner These guidelines are to account for both the needs of the human operator in the work process and the use of computational potentials to make the work system a really most effective one In other words this book is meant to provide guidelines for the organisational and technical design of work systems Therefore this book is an interdisciplinary one Findings in individual disciplines are not the main issue It is rather the combination of these findings for the sake of the performance of work systems which makes this book a useful one for designers who are interested in this modern approach and its implementation
