to the Exchequer of 0.1 billion in 2013/14. Other forecasts by the OBR include the ILO unemployment rate to rise from 8.4% to 8.7% over the coming year, household disposable income growth to be weak in 2012/13 but consumption to begin to offer some support to the recovery in the second half of the year that the situation in the euro area remains a major risk to accurate forecasting. The publication is divided into five chapters: Chapter 1 Executive summary; Chapter 2 Developments since the November 2011 forecast; Chapter 3 economic outlook; Chapter 4 Fiscal outlook; Chapter 5 Performance against the Government's fiscal target. Pablo Brañas-Garza, Levent Neyse, Martin Voracek, Ulrich Schmidt, Monica Capra, 2019-01-29. Behavioral correlates of hormones emphasized by psychologists have captured the attention of economists in the past years. Behavioral economists in particular have investigated the possible roles of hormones on economic decision making and behavior as well as social preferences and cognitive abilities. Testosterone, oxytocin, dopamine, serotonin and stress hormones are the foremost studied ones in economic contexts. Yet the results are mixed and the relationship between hormones and economic behavior is under investigated to this date. Hormone levels are measurable and manipulatable e.g. activate/deactivate/block. The fact that behavioral economics also employs experimental methodology makes it possible to observe both correlational and causal relationships between hormones and economic behavior. Since numerous environmental, social and biological factors interact with hormone fluctuations, capturing the true impacts of hormones on decisions and behavior is challenging. Manipulating hormone levels in the body is a method that is used to tackle this issue. Such studies compare observed behaviors of hormones or placebo administered participants to determine causal relationships. This Research Topic welcomes the studies on the direct or indirect correlates of hormones on economic behavior and decision making to create new insights on the economic consequences of endocrine activity. **Challenges and Solutions in Forecasting and**

Decision-Making in Marine Economy and Management. Xuemei Li, Kevin Li, Junjie Wang, Song Ding, 2025-08-11. The marine economy and management pertain to the sustainable utilization of marine resources through internal and external coordination across departments with a focus on maximizing social and economic benefits. However, the persistence of activities such as overfishing, offshore oil spills and excessive coastal development has led to escalating issues like offshore eutrophication, ocean acidification, warming and marine plastic pollution, posing significant threats to marine sustainability. In alignment with the United Nations Sustainable Development Goal 14, substantial progress has been achieved by ocean management researchers in analyzing fishery resource management, optimization of marine industrial structures, development of marine energy and adaptation of marine climate change. Other developments since the March 2012 forecasts include the unemployment rate has fallen to 7.8% and the overall level of employment rose to 29.6 million in the three months to September. Around half the increase since 2011 has been driven by a rise in self employment and part time employees though total hours worked per week have also risen. The situation in the euro area continues to weigh on confidence and trade. Inflation is also likely to be higher in the short term reducing the growth of real household disposable income and consumption. The Government has a greater than 50% chance of hitting its fiscal mandate.
