Linda Ruth Greene, 2019-10-28 Why is it that in today's society with all the modern advancements in medicine we as a species seem to be getting sicker and sicker Diseases such as cancer are more prevalent today than they were in 1950 Is it because our medical science is somehow failing us Is it that today's doctors treat symptoms rather than finding the root of the problem that caused the illness in the first place Our minds work according to the law of belief which states Whatever you believe and feel to be true long enough will become your reality It means that whatever you subconsciously feel to be true in your inner world thoughts long enough will always show up in your outer world experience The Mind Can Heal and the Mind Can Age explores the premise that our minds are the true culprit Areas to be explored How you create your own reality and healing with your thoughts words and actions How the mind and the mental state a person is in dictates the state of the physical body How attitude and self talk play a huge role in the aging process How The Law of Attraction effects your health both negatively and positively How stress affects your health as well as the process If anyone says to this mountain Be lifted from your place and hurled into the sea and has no inward doubts but believes that what he says is happening it will be done for him I tell you then whatever you ask for in prayer believe that you have received it and it will be yours Mark 11:23-24 **The Joy of Science** Richard A. Lockshin, 2007-11-05 Scientists have great passion What could be more exhilarating than to go to work every day feeling as if you were once again a nine year old called up to the stage to help the magician with his trick To be a researcher is to always be in the position of having the chance to see how the trick works No wonder that many researchers

feel that each new day is the most exciting day to be a scientist It therefore is not surprising that scientists have such trouble communicating with non scientists It is difficult for the scientist to understand a life not focused on the desire to understand But the differences are not that Everyone wants to understand that is one of the factors that make us human The difference is more that scientists limit their definition of comprehension to specific rules of logic and evidence These rules apply and are used in everyday life but often with less rigor or restrictions on evidence
