Democracy Disconnected Fiona Anciano, Laurence Piper, 2018-10-03 Why is dissatisfaction with local democracy endemic despite the spread of new participatory institutions This book argues that a key reason is the limited power of elected local officials especially to produce the City City Hall lacks control over key aspects of city decision making especially under conditions of economic globalisation and rapid urbanisation in the urban South Demonstrated through case studies of daily politics in Hout Bay Democracy Disconnected shows how Cape Town residents engage local rule In the absence of democratic control urban rule in the Global South becomes a complex and contingent framework of multiple and multilevel forms of urban governance FUG that involve City Hall but are not directed by it Bureaucratic governance coexists alongside market developmental and informal forms of governance This disconnect of democracy from urban governance segregates people spatially socially but also politically Thus while the residents of Hout Bay may live next to each other they do not live with each other This book will be a valuable resource for students on programmes such as urban studies political science sociology development studies and political geography

Chromosome Manipulation for Plant Breeding Purposes Pilar Prieto, 2021-01-29 The ability to exploit the potential of wild relatives carrying beneficial traits is a major goal in breeding programs However it relies on the possibility of the chromosomes from the crop and wild species in interspecific crosses to recognize associate and undergo crossover formation during meiosis the cellular process responsible for producing gametes with half the genetic content of their parent cells Unfortunately in most cases a barrier exists preventing successful hybridization between the wild and crop chromosomes Understanding the mechanisms controlling chromosome associations during meiosis are of great interest in plant breeding and will allow chromosome manipulation to introduce genetic variability from related species into a crop In addition to interspecific hybrids other materials such as natural and synthetic polyploids and introgression lines derived from allopolyploids among others are powerful tools in the framework of plant breeding For example an extra pair of alien chromosomes in the full genome complement of a crop species has been frequently used as a first step to access genetic variation from the secondary gene pool in breeding programs In addition such introgression lines are also pivotal in the study of interspecific genetic interactions in the chromosomal location of genetic markers and in the study of chromosome structure and behavior in somatic and meiotic cells Contained in this Special Issue are accounts of original research including new tools to identify chromosome introgressions and the development and characterization of introgression lines and interspecific hybrids carrying desirable agronomic traits for plant breeding purposes Also included are reviews about the chromosome engineering of tropical cash crops and the effect of chromosome structure on chromosome associations and recombination during meiosis to allow chromosome manipulation in the framework of plant breeding
