Unix for Oracle DBAs Pocket Reference

Donald K. Burleson, 2001-02-01 The Unix for Oracle DBAs Pocket Reference puts within easy reach the commands that Oracle database administrators need most when operating in a Unix environment. If you are an Oracle DBA moving to Unix from another environment such as Windows NT or IBM Mainframe, you know that these commands are far different from those covered in most beginning Unix books. To jump start your learning process, Don Burleson has gathered together in this succinct book the Unix commands he most often uses when managing Oracle databases. You'll be able to reach into your pocket for the answer when you need to know how to display all Unix components related to Oracle, identify the top CPU consumers on your server, and even kill processes when necessary. Stack Unix commands into powerful scripts that can perform vital DBA functions. Monitor Unix filesystems and automatically manage your trace files, dump files, and archived redo log files. Use essential server monitoring commands such as top, sar, and vmstat. And there's much more between these covers. If you need to get up to speed with Oracle on Unix and quickly, this book is for you. **The UNIX CD Bookshelf**, 1999

sed & awk Dale Dougherty, Arnold Robbins, 1997-03-01 sed awk describes two text processing programs that are mainstays of the UNIX programmer's toolbox sed is a stream editor for editing streams of text that might be too large to edit as a single file or that might be generated on the fly as part of a larger data processing step The most common operation done with sed is substitution replacing one block of text with another awk is a complete programming language Unlike many conventional languages awk is data driven you specify what kind of data you are interested in and the operations to be performed when that data is found awk does many things for you including automatically opening and closing data files reading records breaking the records up into fields and counting the records While awk provides the features of most conventional programming languages it also includes some unconventional features such as extended regular expression matching and associative arrays sed awk describes both programs in detail and includes a chapter of example sed and awk scripts This edition covers features of sed and awk that are mandated by the POSIX standard This most notably affects awk where POSIX standardized a new variable CONVFMT and new functions toupper and tolower The CONVFMT variable specifies the conversion format to use when converting numbers to strings awk used to use OFMT for this purpose The toupper and tolower functions each take a presumably mixed case string argument and return a new version of the string with all letters translated to the corresponding case In addition this edition covers GNU sed newly

available since the first edition It also updates the first edition coverage of Bell Labs nawk and GNU awk gawk covers mawk an additional freely available implementation of awk and briefly discusses three commercial versions of awk MKS awk Thompson Automation awk tawk and Videosoft VSAwk

When You Can't Find Your UNIX System Administrator Linda Mui,1995 This is the only book to look at common UNIX system administrator problems from the user perspective It provides troubleshooting tips a questionnaire on which users can record the specific information they need and explains the diagnostic process A quick reference card summarizes what to try first second and third for commonly encountered problems
