Virtual Reality Headsets - A Theoretical and Pragmatic Approach Philippe Fuchs, 2017-02-24 The purpose of virtual reality is to make possible a sensorimotor and cognitive activity for a user in a digitally created artificial world Recent advances in computer technology have led to a new generation of VR devices such as VR headsets Accordingly virtual reality poses many new scientific challenges for researchers and professionals The aim of this book a manual meant for both designers and users of virtual reality is to present the current state of knowledge on the use of VR headsets in the most complete way possible The book is divided into 13 chapters The objective of the first chapter is to give an introduction to VR and clarify its scope The next chapter presents a theoretical approach to virtual reality through our Immersion and Interaction methodology also known as 3I2 model Then a chapter about human senses is necessary to understand the sensorimotor immersion especially vision These chapters are followed by several chapters which present the different visual interfaces and the VR headsets currently available on the market These devices can impart comfort and health problems due to sensorimotor discrepancies A chapter is devoted to these problems followed by a chapter that gives a detailed discussion of methods and 32 solutions to dispel or at least to decrease VR sickness The following three chapters present different VR applications that use VR headsets behavioural sciences industrial uses and Digital Art and the final chapter provides conclusions and discusses future VR challenges

Virtual Reality and Augmented Reality Bruno Arnaldi, Pascal Guitton, Guillaume Moreau, 2018-03-15 Virtual and Augmented Reality have existed for a long time but were stuck to the research world or to some large manufacturing companies With the appearance of low cost devices it is expected a number of new applications including for the general audience This book aims at making a statement about those novelties as well as distinguishing them from the complexes challenges they raise by proposing real use cases replacing those recent evolutions through the VR AR dynamic and by providing some perspective for the years to come

Basics of Virtual Reality Armin Grasnack, 2022-01-04 Today the reality we know can be recorded and reproduced true to reality using technical processes Space and time are recreated virtually as a copy in artificial reality However the reproduction of virtual reality is not limited to a mere copy of what exists A visitor to the virtual space does not have to be content with the pixelated image of the old familiar but can encounter unreal phenomena in the illusory world that never existed in real life or are even physically impossible This enables an expansion of the recorded reality and allows the perception of surprisingly new perspectives A perspective denotes the perception of a fact from a certain point of view and corresponds to the way of looking at things But a perspective is also the observation of a scene from a viewing position From different perspectives the illusion of reality arises during the reproduction by observation This vision is not based on imagination or hallucination but is the basic function of virtual reality This book describes the concepts systems and technologies used to create virtual reality from its ancient beginnings to the present and provides a glimpse into a possible future This book is a translation of the original

German 1st edition Grundlagen der virtuellen Realität by Armin Grasnick published by Springer Verlag GmbH Germany part of Springer Nature in 2020 The translation was done with the help of artificial intelligence machine translation by the service DeepL.com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors **The Boundaryless Enterprise** Arnold Picot, Ralf Reichwald, Rolf T. Proprioception José A. Vega, Juan Cobo, 2021-06-23 Proprioception is the sense of body position and movement with conscious and unconscious components that determines and conditions the human body's relationship with the environment This quality of mechanosensitivity deteriorates in some pathologies and is responsible for some alterations of the locomotor system that appear in elderly persons In those situations the failure of proprioception reduces the quality of life of the subjects The widespread use in developed countries of substitute joint prostheses makes it necessary to rethink the concepts of movement detection and perception As such this book examines the basics of proprioception as well as its function in the lower extremities the head in children with disabilities and its connection with virtual reality **Virtual Reality Church** Darrell Bock, Jonathan Armstrong, 2021-03-02 Is Virtual Reality a Biblical Reality As virtual reality becomes increasingly prominent throughout society churches must assess how to respond thoughtfully and biblically In Virtual Reality Church theologians Darrell Bock and Jonathan Armstrong present a systematic reflection on how to faithfully apply virtual reality for ministry purposes They examine the risks like compromising the meaning of tangible worship and opportunities like safely reaching persecuted churches of integrating revolutionary technologies into the Christian life Learn to think critically theologically and pastorally about new technologies so that you can faithfully advance the gospel into the future Virtual Reality: The Last Human Narrative? Thorsten Botz-Bornstein, 2015-07-14 Is virtual reality the latest grand narrative that humanity has produced Our civilization is determined by a shift from an original event to a virtual narrative This concerns not only virtual reality but also psychoanalysis gene technology and globalization Psychoanalysis transforms the dream into a

narrative and is able to spell out the dream's symbols. Gene technology narrates dynamic self-evolving evolution as a gene code. Discourses on globalization let the globe appear as once more globalized because reproduced through narrative. Finally, reality itself has come to be narrated in the form of a second reality that is called virtual. This book attempts to disentangle the characteristics of human reality and posthuman virtual reality and asks whether it is possible to reconcile both.

Where are you? Self- and body part localization using virtual reality setups Albert van der Veer, 2019-09-19. This volume presents a line of original experimental studies on the bodily self investigating where people locate themselves in their bodies and how accurate they are at localizing their body parts. So far, it was not well known whether people locate themselves in one or more specific regions of their bodies. On the other hand, some systematic distortions in indicating bodily locations were already documented. In the present studies, participants were therefore asked to indicate their self-locations as well as the locations of several of their body parts using a self-directed first person perspective pointing paradigm in various virtual reality (VR) setups: different head-mounted displays and a large screen immersive display. Overall, participants were found to locate themselves mainly in the upper face and the upper torso. However, striking differences in self-localization were found when testing in different VR setups. Upon further investigation, these differences were found to be foremost due to inaccuracies in body part localization. When taking these inaccuracies into account, differences between setups and also with self-localization outside of VR largely disappear. Another striking finding was that providing participants in between pointing phases with information about their bodies in the form of a real-time animated self-avatar did not make them more accurate at locating their own body parts. While manipulating their viewpoint to chest height of their self-avatar did shift the afterwards indicated locations of their own body parts upwards towards where they were seen on the avatar. Potential explanations for the various new findings, also from tasks outside of VR, are discussed. Taken together, this volume suggests a differential involvement of multi-sensory information processing in experienced self-location within the body and the ability to locate body parts. Self-localization seems to be less flexible, possibly because it is strongly grounded in the bodily senses, while body part localization appears more adaptable to the manipulation of sensory stimuli, at least in the visual modality.
