Ashley, Stephen Garvin, Erik Pasche, Andreas Vassilopoulos, Chris Zevenbergen, 2007-02-01 One of the effects of global climate change is the increasing variability of extreme flood events and cyclones Current measures to mitigate flood impacts particularly in the urban environment are based on previously planned flood risk intervals and no longer provide sufficient protection Being prepared for unexpected changes and extreme flood events asks for a paradigm shift in current strategies to avoid and manage flood disasters In order to stem the increasing impact of urban floods a major rethink of current planning and flood management policies and practice is required taking into account different spatial and temporal scales This book addresses a broad spectrum of relevant issues in the emerging field of urban flood management It may act as a stimulus for further research and development in urban flood management while informing and engaging stakeholders in the promotion of integrated and cooperative approaches in water management An interdisciplinary approach which will be of interest to all those who are active in water risk and urban management *Water Resources and Environment* Miklas Scholz, 2015-11-17

Enhancing Urban Environment by Environmental Upgrading and Restoration Jiri Marsalek, 2004-09-16 The fusion of algebra analysis and geometry and their application to real world problems have been dominant themes underlying mathematics for over a century Geometric algebras introduced and classified by Clifford in the late 19th century have played a prominent role in this effort as seen in the mathematical work of Cartan Brauer Weyl Chevalley Atiyah and Bott and in applications to physics in the work of Pauli Dirac and others One of the most important applications of geometric algebras to geometry is to the representation of groups of Euclidean and Minkowski rotations This aspect and its direct relation to robotics and vision will be discussed in several chapters of this multi authored textbook which resulted from the ASI meeting Moreover group theory beginning with the work of Burnside Frobenius and Schur has been influenced by even more general problems As a result general group actions have provided the setting for powerful methods within group theory and for the use of groups in applications to physics chemistry molecular biology and signal processing These aspects too will be covered in detail With the rapidly growing importance of and ever expanding conceptual and computational demands on signal and image processing in remote sensing computer vision medical image processing and biological signal processing and on neural and quantum computing geometric algebras and computational group harmonic analysis the topics of the book have emerged as key tools The list of authors includes many of the world s leading experts in the development of new algebraic modeling and signal representation methodologies novel Fourier based and geometric transforms and computational algorithms required for realizing the potential of these new application fields

WATERMATEX 2000 P. Lessard, Peter A. Vanrolleghem, 2001-05-31 Selected Proceedings of the 5th International Symposium on Systems Analysis and Computing in Water Quality Management Held in Gent Belgium 18 20 September 2000 The focus of the IWA Specialist Group on Systems Analysis and Computing is essentially methodological Its goal is to foster discussion of the interdisciplinary issues cutting across the many topics of interest within IWA Consequently the themes of the symposium did not reflect specific concerns with sewers or wastewater treatment or river basin management or surface water quality or groundwater contamination Rather the symposium was organised along the lines of new models decision support systems uncertainty and risk analysis integrated urban wastewater systems operations and control sensors and monitoring optimal experimental design methodologies model selection and calibration techniques and time series analysis Evidently the papers may each have case

specific aspects but they also highlight matters of methodology that are common to all with a distinctly interdisciplinary character There was an open call for papers resulting in abstracts from 30 countries around the world Papers for oral and poster presentation at the symposium were selected by the Programme Committee from full papers They were reviewed again and 47 of them were finally included in these proceedings Notably 8 of the contributions were selected among the posters through a competition announced prior to the Symposium The collection of papers in these proceedings are a comprehensive update that will prove invaluable for those working in the fields of environmental engineering river basin management aquatic ecology process optimisation data mining planning and monitoring
