Yousof, Mohamed Ibrahim Mohamed Ahmed, 2023-03-31 Statistical distributions are essential tools to model the characteristics of datasets such as right or left skewness bi modality or multi modality observed in different applied sciences such as engineering medicine and finance The well known distributions like normal Weibull gamma and Lindley are extensively used because of their simple forms and identifiability properties In the last decade researchers have focused on the more complex and flexible distributions referred to as Generalized or simply G families of probability distributions to increase the modelling capability of these distributions by adding one or more shape parameters. The main aim of this edited book is to present new contributions by researchers in the field of G families of probability distributions The book will help researchers to Develop new univariate continuous and discrete G families of probability distributions Develop new bivariate continuous and discrete G families of probability distributions Derive beneficial mathematical properties such as ordinary and incomplete moments moment generating functions residual life and reversed residual life functions order statistics quantile spread ordering and entropies and some bivariate and multivariate extensions of the new and existing models using a simple type copula Visual Texture Michal Haindl, Jiri Filip, 2013-01-18 This book surveys the state of the art in multidimensional physically correct visual texture modeling Features reviews the entire process of texture synthesis including material appearance representation measurement analysis compression modeling editing visualization and perceptual evaluation explains the derivation of the most common representations of visual texture discussing their properties advantages and limitations describes a range of techniques for the measurement of visual texture including BRDF SVBRDF BTF and BSSRDF investigates the visualization of textural information from texture mapping and mip mapping to illumination and view dependent data interpolation examines techniques for perceptual validation and analysis covering both standard pixel wise similarity measures and also methods of
