

LIZARD EVOLUTION VIRTUAL LAB

Answer the following questions as you finish each module of the virtual lab or as a final assessment after completing the entire virtual lab.

Module 1: Ecomorphs

1. At the beginning of the virtual lab, you were asked to sort eight lizards into categories. What criteria did you initially use to make your groups? Did you revise your criteria later? Why?

I based my criteria off of the legs of the lizards. I chose the size of the legs because I think that each of the different anoles had evolved based on their habitat that they lived in. I did not revise my criteria.

2. An adaptation is a structure or function that is common in a population because it enhances the ability to survive and reproduce in a particular environment. Provide one example and an explanation of one adaptation in the Anolis lizards.

one adaptation is the short legs of the short-legged Hispaniola lizard which I think it because of the environment, and from when the lizards were there they walked on the ground that a shorter leg made it easier to walk on the ground.

3. Provide one evolutionary explanation for why lizards living in the same part of the habitat (i.e., grass) would have similar characteristics.

there are many ways to do tasks in a similar environment... however the one that is the best will help them survive therefore become the most common way.

4. What is an ecomorph? Provide one example from the virtual lab.

Ecomorphs are species with similar body types and habitats. An example is how the short-legged Hispaniola and occulta Puerto Rico lizards both have short legs.

5. How is an ecomorph different from a species?

ecomorph only classifies the organism into similar body types and habitats, species can have different characteristics.

6. Explain how a particular body feature of one of the lizard ecomorphs from the virtual lab is an adaptation to their particular niche.

The occulta Puerto Rico anole has short legs because it needs to be able to stick to trees in their habitat.
